Chapter 1

opening

1.1 1X

1.1.1 1m

```
trf resp to 1C: 1D = 4+H. 1H = 4+S. 1S = (4)5+D. # M first if < GF
nat resp to 1D: 1M = 4+M
1N = 6-10

1m - 2m = 8-11(12)
    suit = nat (may be stopper) and invitational
    jump = spl, SI
    3m = to play
2S = m fit GF (PH: inv)
    suit = spl, SI
1m - 3m = pre

1C - 2D = 6+D inv.
1D - 2C = 5+C, GF. (PH: inv)
    2D = min.
1D - 3C = 6+C inv.

2H = 3-7, 5S4H+
    2N/3M = nat inv
    P/2S/3m/3om = s/o
    4C/4D = ST in H/S, then +1 = good hand
2N = (s)bal inv
    3m = NF
    1D - 2N; 3C = 55+m, s/o
    suit = spl, SI
3N = 13-15, (4333)
double jump (1D - 3HS & 1C - 3DHS) = weak 7+ card with 6-6.5 winners
```

1.1.2 1M

We play Kaplan-interchange after 1H, i.e. $1N = 5+S$, $1S = 4-S$. However, $6+S$ inv will bid 1S initially, then rebid 2S (3S) regardless of opener's rebid.

```

1H - 1S = F1N-like: 6-11(12), 4-S (or 3+H); or inv, 6+S
1H - 1N = 5+S, F1
1S - 1N = SF

raise = 8-10 values
jump raise = pre # NV: wild, V: usually unbal
1H - 2S & 1S - 2N = 4+ fit, GF
1H - 2N & 1S - 3H = 4+ fit, inv # 1H - 2N subseq. same as Jacoby

2C = 2+C, FG # may have 4S
2D = 5+D (or 4441), FG
1S - 2H = 5+H, GF

3m = nat inv
    1M - 3C - 3M = NF # use 3D for GF
    1M - 3D - 3M = GF
    new suit = GF
3N = (4333), CoG
double jump = spl # 4M-1 would be tighter, otherwise roughly 10-13(14)

```

PH

```

2C = Drury. same range as original 1M - 2M
    2D = re-inv
    [1S - 2C] 2H = nat inv NF
    2M+1 and above = same as after 1M - 2M, but slammish
2X = nat inv NF
raise = 7-
2N = 9-10, 4+ fit, with short
    3C = ask, then resp spl (jump = void, M = C)
jump suit = fit-showing
spl = I think never (can 2N first), so should be very good hands (4+M
    with void)

```

1.1.3 Gazzilli

Before introducing opener's rebids, let's introduce (our) Gazzilli, which uses $1C - 1DH - 1S$, $1D - 1HS - 1N$, $1H - 1SN - 2C$, $1S - 1N - 2C$ as a relay. showing either

- a standard rebid of 1C, 1D, 1H, or 1S.
- 16+

Responding to it is simple: +1 = 8+, **except**:

- limit raise: 1M - 1SN; 2C - 3M
- 8-10 5S4H: 1m - 1S; Gaz - 2H
- oM invite: 1H - 1S; 2C - 2S and 1S - 1N; 2C - 3H

otherwise, bid is weak and s/o (2N = pick a minor); and **jump is nat ST**. We'll revisit the opener's rebid later.

1.1.4 1m - 1M

```
1m - 1M(-1);

1C - 1D - 1H = 11-17, 4+S
    1S = 3+S to play, 2S = 8-10 fit, 3S = inv, 2D = 4SGF
1D - 1H - 1S = 11-17, 4+S # then 4SGF

1C - 1DH - 1S = Gaz # 18+ usually hide 4S first
1D - 1M - 1N = Gaz # 18+ usually hide 4S first

1C - 1DH - 1N = min bal # then 2-way
1D - 1M - 2C = min nat # 3M154 can also Gaz then show 3-fit

rebid 2m = 13-15, good (two of AKQ) 6+m. can be weaker if longer m #
    then 2M = F1
rebid 3m = 15-17, good (two of AKQ) 6+m 2-M. can be weaker if longer m
    1C - 1DH - 3C - 3D = GF checkback, 3M = NF
    1D - 1M - 3D - 3M = 6+M GF
rebid 3N = (semi)solid 6+m, usually to play
rebid 2N = 17-18 bal

1C - 1H - 2H = 10-13, 6C5H+, NF
1D - 1S - 2H = 10-13, 6D5H+, NF
```

```
1m - 1M(-1);

# for true fits: always show in first round
1C - 1DH - 2D* = 11-13(14) unbal 4M fit**
1C - 1M-1 - 2M = 11-13(14), 4M fit and bal # for right-siding
1D - 1M - 2M = 11-13(14), 4M fit (and unbal)
jump & jump reverse = inv+ (good 14+), spl**
```

```
double jump = GF, void spl (4m = 6+m, 4+fit)
1m - 1M(-1) - 3M = 17-18 bal, 4+M
**exception: the lowest minispl may be 15-16, 5m4M22. can ask with +1.
   (back to 3M = 5m4M22)

# for min unbal 3M fits:
After 1m - 1M(-1) - Gaz, if accepted (+1), back to 2M shows 3M fit with
min unbal
```

The following design may seem asymmetric, but with a reason: if resp already choose to s/o, there's no need for min unbal to even bid. In this case, the more severe problem is 15-17 6m3M, one of natural's nightmare. However, it's not the case when resp is 8+ and unlimited (since 15-17 6m is already GF), where you might want to show your 3-fit for min bal.

```
1m - 1M(-1); Gaz -

# if not accepted
lowest M = 15-17, 3M6m
2N = nat inv NF
others = nat GF

# if accepted (+1)
2m = min unbal, but you also have the option of:
2M = min unbal, 3M fit
others are strong and GF. see "subseq after Gazzilli accepted".
```

1.1.5 1m - 1N & 1C - 1S

```
1C - 1S - 1N = 11-13 bal, no 3D unless (4333)
  2C → 2D (then 2N/3C = inv). 2D = usually 5D inv. 2M = (3)4+M GF.
  2N → 3C. others = GF
  # notice that 1C - 2D = 6+D, inv
1C - 1S - 2C = min nat, 2-D
1C - 1S - 2D = min, 3+D
1C - 1S - 3C = 15-17, good 6+C inv NF
1C - 1S - 3D = 15-17, good 3+D inv NF
1C - 1S - 2M & 1m - 1N - 2M = nat 16+
  [M = H] 2S = min, ready to pick preferences
  [M = S] 2N = min NF, opener's only forcing bid is new suit
1m - 1N - 2m = min nat
```

1.1.6 1S - 1N & 1H - 1SN

```

1H - 1SN & 1S - 1N
2C = Gaz. 11-15, 6+M; or 16+ # can be weaker if want GF opp. 8+
2D = 4+D, 8+
2M = 11-15, 5M, (2)4+C # it is rare to have bal here, since either
    passes F1N or opens 1N, however, 1H - 1N - 2H unavoidably would have
    min bal
jump new suit = concentrated 14-16, 5-5
2N = concentrated 14-16, some 6-4
    3C = ask # then 3M = 6M4C
    3X = NF # 3C then bid = GF
3M = 6+ good M, roughly 5 Losers # roughly 14-17. basically, Gaz then
    rebid 3M = GF
    new suit = cue
3N = solid M, roughly 6M 15-17, can be slightly weaker if longer

# different sequences
1S - 1N - P = 11-12(13) bal (against 1N)
1S - 1N - 2H = 11-15, 4+H

1H - 1N - 2S = simple raise
1H - 1N - 3S = inv raise
1H - 1N - 4X = 4+S, spl (GF minimum)
1H - 1N - 4S = shapely raise (a bit of gamble)
1H - 1N - 2N - any - 3S = 6H4S inv

1H - 1S - 2S = 14-16, concentrated 6H4S+ # then P/3H = s/o, 2N/3S =
    inv, others = nat GF(?)
1H - 1S - 1N = 11-15, 2-4S # type 1: min bal, type 2: 5H4S
    P = s/o
    2C = ask, either inv or with 4S
        then 2D = no 4S; 2H = 4S, min; 2S = 4S, max.
    2DH = s/o
    2S = 6+S inv
    2N = no agreement
    3C = s/o # 1H - 3C already inv
# notice that this is easy because 1S is lower than GF

```

1.2 1X subseq

1.2.1 2/1, and nebulous 2C

We use the "2/1 always GF & nebulous 2C" approach, where all balanced GF hands without 5D/H starts with 2C so that 2D/H promises 5+ card. (4441 starts with 2D, since it is tolerable to bid D with a fit anyways) We use slightly different

systems after 1M - 2C and 1M - 2DH:

```
1M - 2X
2N = 6+M without 4oM, any strength # but deny direct 3M
2oM = 4+oM, any strength**
3W = nat extra
3Y = good 16+, 5-5 slamish
3N = (15)16-18, exactly 5M332fit
3M = 15-17, good 6+M
higher jump = long M splinter

**exception: 1H - 2D - 2S = nat extra, or 6H4S, since 5H4S min can bid
2H first.
```

```
1M - 2D - 3D = 4+ fit (not promising extra); or 3+ fit with extra
1S - 2H - 3H = 3+ fit, extra. 4H = 3+ fit, min
1M - 2DH - 2M = catchall: min unbal/bal, or rarely 19+ bal (will quant
later)
3X = nat and extra
```

```
1M - 2C
2D = catchall: min unbal/bal (no 4oM), or rarely 19+ bal (will quant
later)
2oM = art unbal, usually not suitable for declare
2M = extra with 4+D
3C = 4+ fit, extra
jump new suit = extra and 5-5+
```

For subseq, the principles are:

```
# delay fit
if 2M available: 2M = fit, 3M = almost slam-force. 4M = min picture
jump.
otherwise: 3M = extra. 4M = min (fast arrival) # +1 = FF as always
[after C double fit in 3M] no 2RKC.
[after D/H double fit in 3M] use 2RKC.
if resp made an unnessesary jump: usually M (oM) fit splinter. these
are sure ones:
1M - 2DH - 2M - jump
1M - 2C - 2D - jump
1M - 2X - 2N - jump
1M - 2X - 2oM - jump # oM fit

# after raises
3N = min, s/o
4m = mild slam inv
4M = dead min
others = show/ask stopper, but can be cuebid before ST
```

```
# cuebid first so that RKC/ERKC is clearer. jump new suit may be
  treated as auto-splinter

2N = waiting, but usually SI since in this system, we show the
  important infos (M/oM/fit) first.
rebid or non-reverse 3X = nat SI
reverse 3X = ask/show stopper; or nat 65 and will promise rebid
```

1.2.2 subseq after Gazzilli accepted

After Gaz accepted and opener is 16+, GF has established. Therefore, the main problems are:

- finding the correct contract: 4M or 3N, or occasionally 5m
- investigating slam

Doesn't this look like 2-over-1? Therefore, I proposed a simple method: exchange the lowest new suit with 2N, showing a waiting hand, and after that, the responder can freely bids naturally at the two level or 2N as a waiting bid. Similar to 2/1, direct 3X by opener or resp shows extra shape and strength. (caveat: if 2N points to some major suit, opener usually shows that. However, if it points to diamonds, I think it promises extra shape or strength.)

```
# these are the waiting bids after Gaz accepted
1C - 1D*; 1S - 1N; 2D
1C - 1H*; 1S - 1N; 2D
1D - 1H ; 1N - 2C; 2S
1D - 1S ; 1N - 2C; 2H
1H - 1S*; 2C - 2D; 2S
1H - 1N*; 2C - 2D; 2S**
1S - 1N*; 2C - 2D; 2H

**this is an exception: because most fits will not be in Gaz (only GF
  fits will), we should not save space for it. This also mean that 1H
  - 1N - 2C - 2D - 2N = 18+, 3+S.
```

1.2.3 after Gaz's weak 2m

Although we say "same as natural", but we shall clarify a bit:

```
# 1C - 1DH* - 1S* - 1N* - 2C
2D = art GF, may or may not have D
```

```

2M = 3M. 2oM = 4M. 2N = nat. 3C = 5+C.
[M = S] 2H = nat inv NF # natrual system usually play as 8-10, but we
excluded it
[M = H] 2S = GF
2N = inv
3C = inv
3D = 5-5 inv
[M = S] 3H = 5-5 inv # therefore 2D then 3H = 5-5 GF (4H will know fit
or not after 2D)

# 1D - 1M - 1N*- 2C*- 2D
[M = S] 2H = nat inv+, F1
[M = H] 2S = GF
2N = inv
3C = art GF
3D = inv
[M = S] 3H = 5-5 inv

```

1.2.4 2-way

```

1C - 1M-1 - 1N
2C = transfer 2D. s/o or inv
    2D = forced. max with 3M can anti-transfer to 2M.
        P/2X = s/o. 2N = inv. 3m = nat inv, deny 5M. 3N = 5M(332) CoG.
        [M = S] 3H = 5-5 inv
    2M = max, 3M fit
2D = GF ask.
    2M = nat. 2N = default. 3m = nat, medium+ suit.
2X = nat inv NF.
2N = transfer 3C. s/o or CoG with spl.
    P = s/o.
    bid = spl the bid suit (3M = spl C). opener can use +1 to
    distinguish 4M or 5M. 3S/3N show the same spl but 5/4-card.
3X = nat ST.
4X = 7+M, spl

# ON if 1C - (1X) - [bid = 4+M] - 1N
# OFF if 4-th seat interfered
# PH ON except 2D/3X = nat inv

```

1.2.5 1m - 1X - 2N

```

# 1m - 1M(-1) - 2N
3C* = ask 3M, otherwise puppet to 3D. may be s/o so should not exceed 3M
# either s/o in D/M, or most 5(+)M GF, or 6+m ST

```

```

3D = no 3M
    P/3M/4M = s/o
    oM = natrual, GF, 5M 4oM
3M = 3M
    P/4M = s/o
    3M+1 = FF in M. oM = ST
# no matter 3D or 3M:
    [m = C] 4m = nat 6+ cards, ST
    [m = D] 4C = 6+C, ST.
3D* = minor-oriented ask # we assume no 5m4M ST will initially bid 1M
    [m = C] act as minor Stayman. therefore 3H = 4+C (then 3S = 4+D). 3
    S = 4+D. 3N = 4oM333.
    [m = D] simply fit D SI, then cuebid (3N = FF)
3M = 6+M, slam interest
[M = H] 3S = 44M
[M = S] 3H = 55M
3N = s/o
4m = 5-5, SI
    +1 = 2RKC
    4N/4M/5m = s/o
4M = s/o # including 4H when M = S

# 1C - 1S - 2N
3C = puppet to 3D. s/o or spl
    P = s/o. bid = spl
3D = nat SI, then cuebid (3N = FF)
3M = nat 4+M, therefore should originally be GF (i.e. SI now)
3N = s/o

```

1.2.6 Jacoby 2N

see [conventions/ST](#)

1.2.7 minor invite

We have many minor invites. You expect partner to accept with: not-too-bad min with honor and support, or max (stronger than normal that would accept inv) otherwise. For inviter, it is usually lighter than normal invite, even lighter with longer minor.

1.3 1N

Although 1N opening is 14-16, overcall is still 15-18. For response to overcall, we play system ON. For major system, one slight modification: 5-5 inv transfer S then 3H; 5-5 GF without slam interest goes to smolen (then optionally 4H); 5-5 SI goes to 4C.

```

1N -
2C = ask 4M, may be 5S inv or Garbage (promises 4M unless 5m ST)

        P/3C = s/o.
        suit = spl.
        ... 2N - 3N = s/o. ... 3C - 3N = CoG or mild ST
2N = nat inv
3C = transfer 3D. s/o or GF
    ... 3D - 3N = CoG or mild ST.
        suit = spl.
3D = nat inv NF
3M = GF, spl M, 54+m
    lowest oM = good oM. 3N = s/o. 4m = preference.
        4M+ = double fit. resp to 2RKC.
3N = s/o
4C = 55+M GF # Since 55 CoG => Smolen, this is SI
    4M = min.
    4D = max.

```

```

4H = s/o, pick one.
4S = 2RKC. 4N = (I'll still treated as 2RKC). 5m = 2ERKC.
4S = maybe 65+m ST
4N = s/o
4N = quant
    if max: 5X = 4-card (if 5-card, bid again), jump 6X = 6-card
5m = s/o
5N = inv 7X

```

1.4 2C

We use control-showing response (i.e. A = 2, K = 1) after 2C opening. The rest are simply natural except:

- after any 2N, we use response same as 2N opening
- cheaper minor = double negative after 2C - 2D - 2S/3C (but not 3D, so you might open some very strong, non-GF 1D)
- jump response shows a "one-loser suit" (ex: KQJTxx+) without outside CT.

```

2D = 0-1 CT
2H = 2 CT. 2S = AK. 3C = 4+ CT
    then nat. bal usually still 2N. will deny bidding NF bids if too
    strong
    # ex: 2C - 2S; 2N - 3C; 4m/4N = nat w/o 4M, strong slam interest
    # 2C - 3C; 3N/4N - 4C/5C = ask 4M, 4DH/5DH = transfer
    # TODO: what is 3N ?
2N = KKK
    then same as 2N opening
3DHS = 7+ suit, about 6-6.5 tricks. usually no outside CT. 3N = same
    for C.

```

1.4.1 2C - 2D

```

2C - 2D;
# note that 21-24 bal can contain 5M
2H = nat or 21-22 bal
    2S = forced
        2N = 21-22 bal. 3N = 5+H, 25-27 bal
        bid = nat
    anti-relay: 2N = 6+S. others = nat long suit.
2S = nat unbal or 25+
    3C = weak or waiting

```

```
2N = 23-24 bal. 3N = 25-27 bal ...
... 3N - 4C = ask 4M. 4DH = transfer
```

1.4.2 interfered

```
# direct seat: generally P = stolen, X = worse
(X) - 2D = 1 CT, P = 0 CT GF, XX = 0 CT double negative
(2D) - P = 1 CT, X = 0 CT
(2H) - P = 2 CT, X = 0-1 CT
(2S) - P = 3 CT (AK), X = 0-2 CT
(2N+) - FP. X with 0-1 CT or 0-6p

# 4-th seat:
FP. X = suggest PEN.
```

1.5 2N

We play [Muppet](#) Stayman. (almost same as puppet, just exchange the direct 3H and 3N)

```
3C = ask 5M. may be 5+m ST or 5S4H.
  3D = some 4M
    3H = 4+S.

    3C (likely hear 3H) then direct 4H: 6S5H ST
    3D → H then 3S, then 4S over 3N: 6H5S ST
3S = minor Stayman
3N = s/o
4C/D = South African. transfer 4H/S, slam interest # s/o trf 3M first.
    +1 = mid+
4H = DON'T USE (for now)
4S = 65+m, ST
4N = quant
5N = inv 7X

```

1.5.1 interfered

```

2N - (3DHS) - X = t/o, others = nat and F
2N - (3C) - X = Stayman, others system ON
2N - (4X) => FP ON, so X = PEN

if 4C available: Still South African. 4CD transfer 4HS
else if 4D available: Jacoby transfer. 4DH transfer 4HS
else 4H/S = nat s/o (P then bid = stronger)

```

1.6 preempts

For preemptive style, I suggest:

- baseline: preempts follows 2-3-4 rule and shows 6+ cards.
- seat adjustments:
 - opening soundness: 2nd > 1st > 3rd
 - jump overcall soundness: 2nd > 1st > 3rd
- Vul adjustments:
 - V/NV: 3X always promises 7-cards
 - V/V: 3X usually promises 7-cards
- 3+ level can be lighter with less defensiveness or more offensiveness. but 2-level usually won't unless partner PH.

- We compensate this with a lighter and wider overcall range.
- NV 3rd seat may be 5-cards
- After preempt, sometimes psychic new suit or 3N, or just lead-directing.

1.6.1 opening pre

We use multi + Muiderberg, which is consistent with our defense to 1N. The number of cards promised for multi follows the above table, and the number of minor cards promised for Muiderberg is always 5-5.

```

2D = pre, some 6+M # can relax to 5+M if NV 3rd seat
    2M/3M = P/C
        # after 2S, 3H = min H, others = mid+ H, feature
        # 2D - 2H - 2S - bid = fit S, subseq same as 1S - 2S
P/3C/4M = s/o
2N = inv+ ask
    3C = mid
        3D = GF ask, then 3H/S = S/H
        3H = P/C
    3DH = min, transfer
    3SN = max, H/S
3D = some 5+M. GF
    3H = 6+H
        3N = 5S. 3S = 6+S. 4S = to play
    3S = 6+S, 1-H
    3N = 6+S, 2H.
    4C+ = 6+S, 3+H, cue.
4C = FP ON. transfer to me.
4D = bid yours. may be preemptive

2M = pre, some 5M5m
    2S = 6+S, NF # very mild encouraging, probably only raise with 2+S
    max
    2N = inv+ ask
        3C/D = min nat
        3H/S = max C/D
        new suit = nat GF
    3C = P/C
    3D = inv+ fit # TODO: maybe change 2S - 3D = H ?
    3M = pre
    3oM = nat 6+oM F1
    4CD = spl
    4HS = s/o

3N = solid 7m, at most 1 outside K
    4C/5C/6C/7C = P/C

```

```

4D = ask control
4M = s/o

# vs 1N, some adjustments are made (can be relaxed a bit if PH or
partner PH)
2D = 10+, 6+M; or 8+ if really good shape
2D - 3C = NF but mild inv
2M = 10-15, 5M4m; 8-15, 5M5m
2M - 3M = constr raise # roughly inv 14-15. therefore 3D inv

```

1.6.2 opening pre interfered

```

2D - (m) - X = PEN # if (1N), then t/o and inv+
2D - (NT) - X = PEN # if (1N), then inv+
2D - (bid) - 2M/3M = P/C
2D - (bid) - jump 4C/D = system ON. hence 4M = s/o. Otherwise, 4H = P/C
2D - (M) - X = P/C, tend to inv # otherwise just guess oM
2D - (2M) - 2N = nat inv NF # ?
2D - (bid) - m = nat F1
2D - (X) - bid = system ON, P = s/o, XX = start Head-hunting
2M - (bid) - X = PEN # if (1N), then just value-showing and tend to P/
C
2M - (X) - bid = system ON, XX = start Head-hunting
2M - (bid) - 3C/4C/5C/6C = P/C

```

1.6.3 after partner's pre vs 1X

We simply plays natural (2N = nat inv, cue = inv+ raise) responses.

1.6.4 notes

```

3D - 4C = RKC
3X - new suit = GF. usually bid 3N if no fit (even no stoppers) #
unless very weak without entry and must play in m
3C - 3D = ask 3M. This allows 3C - 3M = 6-cards.
    3H* = no 3M
    3S = 3S
    3N = 3H
    4D = 33+M
pre - (bid) - X = usually PEN unless defined otherwise
3N - 4C/5C/6C/7C = P/C
3N - 4D = ask outside controls
3N - 4M = s/o

```

4M/5m preempter X afterwards: telling partner that 4M/5m is to make,
let partner decide

Chapter 2

conventions

2.1 Forcing Pass

2.1.1 Forcing Pass

```
FP on if GF
FP if a non-rejected inv(+) forcing bid is interfered below the forcing
    level
after 2C opening
after 2N opening interfered to 3N+
low level natural XX FP on until 2N
(2X/3X/4X) - P - (5X) - FP on if not PH
(2X/3X/4X) - bid/X - (5X) - FP on
# however, not necessarily FP on after a pen X or converted pen X
```

2.2 game (slam) try after 2M fit

We probably agree that short-suit game try and help-suit are very helpful. Also, Jacoby has told us slam with long side suit is also important. I think it's very easily combine these into a Jacoby-2N like structure:

```
sure fit in 2S -
2N = ask, help-suit GT-ish
    3X = help in X # void/x/xx/A/K/Q
    3S = min, scattered values
    3N = max, scattered values
    4X = spl
3X = short suit GT/ST. No interest in CoG. Only cares about waste in X
    (or extra trumps)
3S = 6+S inv, but semi-pre
3N = CoG # jump to 3N is CoG. otherwise 3M+1 = FF
```

```
4X = 5-5 or 4-6, ST
```

```
# for 2H: 2S = ask, and exchange the meaning of 2N and S
# if resp promises (usually) unbal (i.e. 1D opener), then after ask: 3X
  = spl, 4X = void spl
```

2.3 Lebensohl-ish, and good-bad 2NT

2.3.1 Lebensohl

It is widely agreed that distinguishing ranges using 2N as artificial (i.e. Lebensohl) is very beneficial. However, we need to define the "cases" carefully:

- this only applies to advancer or responder
- forced 2N by t/o = normal Lebensohl
- (P/bid) - 1N - (2X) - 2N or (1Y) - X - (2X/2Y) - 2N = transfer Lebensohl. (because these are free bids)
- t/o twice, or resp shows 0-5, or t/o'er passed, 2N = scramble
- other free 2N = nat unless otherwise specified

```
# normal Leb: ... (2X)
2Y = NF
2N → 3C = min, or GF with stopper # min: 0-7(8) for (almost)
  unlimited, 0-4 for 0-7 (i.e. failed to neg X)
  # anti-transfer: GF even against min range
  3X = s/o
  3cue = 4oM (or some 4M) with stopper
  3N = stopper
  3Y = nat inv NF #
  # if interfered: X shows the above hand and tend to PEN
3X = nat constr NF # (8)9-11 for (almost) unlimited, 5-7 for 0-7
jump 3Y = 5+Y GF
3cue = 4oM (or some 4M) w/o stopper
3N = no stopper
4m = GF with extra, SI
4M = s/o. either long M with constr values, or (4)5+M will full values

# transfer Leb: ... (2X)
2N → 3C = want to s/o 3X, or SI with C
3CDH = transfers. transfer to opp's suit = ask 4M
3S = ask for stopper
```

```
3N = s/o
after 2N/3CDH, cue = ask for stopper or ST. new suit = nat
```

2.3.2 good-bad 2NT

Similar for opener's rebid, in competition, using 2N to distinguish ranges are also common practices. We also need to define the cases carefully: suppose the auction goes 1X - (A) - B - (C)

- B should never be P. i.e. if resp passes, there are never good-bad. (note: if resp passes, then 2N is unusual)
- (1) C > 2X
- (2) 1X - (jump overcall) - X - (P)
- (3) 1S - (2H) - X - (P)

```
# if not forced
P = nothing special
X = t/o
# no matter forced or not
2X = nat
2N = transfer to 3C, then bid/P = comp (or min if forced)
    3C = accepted. min.
    3X = s/o
    3Y (resp's suit) = this is a special case:
        if it is not possible for him to inv => s/o # ex: 1m - (1S) -
X ...
        if there are cuebid availble under Y => s/o
        otherwise => GF
    other = GF
bid = (mild) inv. if resp already shows inv, then GF.

# One only exception is that, if partner shows a inv+ 5+M, then showing
  fit is too urgent so that direct 3M is just min. However, good-bad
  is still on, just usually won't have M fit.
```

2.3.3 extended good-bad 2NT

not now, but maybe in the future

2.4 ST gadgets

We use some kickbacks here.

2.4.1 non-serious 3M+1 and 3N

```
# If we fit in M:
jump to 3N = CoG
otherwise, 3M+1 = non-serious

# If we fit in m:
3N = non-serious
```

2.4.2 Jacoby

```
After 2M+1 or 2N shows inv+ or GF fit:

3X = spl, ST (or GT) # 1H - 2S - 2N = spl S
4X = 5-5+ ST, usually with controls in two other suits
3M+1 = always non-serious, no CoG
# if inv+
3M < 3M+1 (mild ST) < 4M
# if GF
4M < 3M+1 (mild ST) < 3M

# If overcalled:
bid = system ON
X = suggest PEN
back to M = weakest
[overcall < 3M] P = stolen
[overcall > 3M] P = SI
```

2.4.3 RKC, EKRC, 2RKC

When not in doubt, we use kickback RKC:

```
# 4X+1 = RKC
+1 = 0/3 keycards
    +1 = ask Q
+2 = 1/4 keycards
    +1 = ask Q
+3 = 2/5 keycards, w/o Q
+4 = 2/5 keycards, w/ Q
+5 = even keycards, some void
```

```

+6 or higher = odd keycards, the bid suit is void. However, if spl
  before, then bid K.
(X)
  ignore
(+1) or (+2) # interfered: DOP1 & DEPO
  X = 0/3 keycards
  +1 = ask Q
  P = 1/4 keycards
  X = PEN
  +1 = ask Q
  +1 = 2/5 keycards, w/o Q
  +2 = 2/5 keycards, w/ Q
  +3 = even keycards, some void
  +4 or higher = odd keycards, the bid suit is void. However, if spl
    before, then bid K.
(+3) or above
  X = even keycards
  P = odd keycards
  X = PEN
  +1 = ask Q
  bid = system on

5X = exclusion RKC, ask for keycards except X # 4N replaces X+1 if
kickback
+1 = 0-0.5
+2 = 1
+3 = 1.5
+4 = 2
...

```

When there's no sure fit shown, or is competed, 4N, or even 5N is RKC.

When a sure doublefit is shown (note: a "scramble fit" is not considered a doublefit), or we showed 5-5 against a balanced hand, we use 2RKC:

```

4A, 2K in the fit suit, 2Q (0.5 each) in the fit suit
two Q is 0.5 + 0.5 = 1
response 0/3/6 (+0.5), 1/4/7 (+0.5), 2/5, 2.5/5.5
the original ask Q is asking whether there are an extra +0.5

```

2.4.4 5N

In order of priority:

- RKC if fit and no 4N available
- choice of slam

2.4.5 ... 4M - 5M

- ask control if opp bids one suit
- general inv

2.5 doubles

2.5.1 support

- is not ON against a natural 1N
- does not apply to D
- does not apply to 1H - 1N*- (bid)
- this is semi-obligatory: you may pass with many wastes in opps suit and min

2.5.2 negative

See [1X interfered](#).

2.5.3 responsive

Traditional.

2.5.4 Lightner

X against a voluntarily bid game/slam, if not slam-sacrifice or have showed power (thus PEN), is requesting a "strange" lead:

- if LDX before, CANCELS IT
- if overcalled before, request DON'T LEAD
- against suit, usually have a void
- against jump to slam or NT, maybe have AK in a side suit
- lead dummy's suit
- lead declarer's suit

2.5.5 maximum X/XX, negative XX, LDX, LDXX

PEN, optional, and maximum, and t/o

2.5.6 slam sacrifice double

This is a very good tool and usually won't hurt (it only sacrifices a PEN or Lightner). The way it work is: We have a preemptive or competetive raise to the 4-level where FP does not apply, and opps bid to slam. Then:

```
... (6X) -
X = 2+ winners
P = 0-1 winners
    X = ask with exactly 1 winner
        P = I have 1 winner
            bid = I have 0 winners
    P = to play. may be 2+ winners, or want to defend, or just don't
    want to sacrifice
        bid = sac
```

2.6 misc

2.6.1 fit-showing jump

A jump is fit-showing (almost) iff PH. Showing 9+ cards and concentrated strength in the two suits, and inv if not interfered, and pre to constr otherwise. In other senarios:

- if we are opener, jump is weak (except 1M - X)
- if we are overcaller, jump is invitational
- if we are overcaller, and opp shows inv+, jump is weak and fit-showing

TODO: after (pre 3C) or pre 3C, 3D/H/S = inv+ H/S/D

2.7 vs artificial bids

To tackle those artificial bids' problem, we need classify them into:

- transfers: promising only 1 known (5+ cards) suit
- multi: promise 1 unknown suit
- assumed-fit: promises 0 or 2+ suits: take-out, Michaels, unusual, fertilizer, etc.

- art fit
- multi-way bids that is not above

Situations can also be classified into:

- opponents opened pre (or non-pre, ex: Flannery or precision 2D)
- we opened and are overcalled (since in this case partner has promised some strength)

2.7.1 principles

General principles are:

- advances are generally natural if it's not opponents suit
- opponents 5+ card suit usually treated as cuebid (meaning might vary)
- if we opened NT, then transfer Leb applied
- P then bid shows a weaker hand. but P then X may vary.
- however, if we already have other methods, then use it (ex: supp X)

2.7.2 vs transfers

- X = t/o and may be lighter than usual (X then X: slightly stronger than usual)
- P then X = PEN if partner opened or they preempted. otherwise still t/o.
- P then bid = often lighter
- direct cuebid = same as original (usually: Michaels, or fit)
- others = same as original

Here are some common situations:

```
(3D = 6+H pre or some stronger hand) - # transfer pre
X = 13+, t/o # then X = 16+, t/o
P then X = PEN
3H = Western

(1N) - (2H = 5+S) - # Jacoby transfer
X = 9+, t/o
```

```

P then X = strong bal
2S = Michaels

(1N) - (4H = 6+S) -
X = 9+, t/o
P then X = strong bal
4S = Michaels
4N = unusual (mms)

1N - (2D = 6+H) - # transfer overcall
X = can be less than inv, t/o
P then X = PEN
2H = Michaels
P then 2N = m-oriented t/o

# vs Rubens
1C - (1S) - 1N - (2D = H);
X = t/o
2H = good D (4-th suit)
2S = good C (good raise)

# vs Rubens II
1C - (1S) - X - (2C = D);
X = supp. 3H.
2D = I think good fit (UvU)
2S = strong general t/o, F1.

(1C) - (1H = 4+S) - # transfer response
X = 9+, t/o
1S = Michaels
2C/2S = nat (same as original)

(1D = 4+H) -
X = 9+, t/o
1H = Michaels
2H = uncertain. maybe good 6+H, but if 1D promises 5+H then probably
    still Michaels.
3H = Western # same as original

```

2.7.3 vs assumed-fit & unusual

We need to talk about penalty scheme first. When partner opens and opp uses multi or assumed-fit bids:

- P then X = inv+, flat (bal) hand. partner can choose to defend or bid naturally

- X then $P/X = PEN$ in at least one suit. usually sharper so subseq P implies t/o (opener's X is coop)

If they t/o or does not promises a 5-card suit, then we simply use system on, or natrual, or otherwise specified. (note: please check our defense to t/o) Otherwise, we use unusual-vs-unusual:

```
# we showed 1 suit, they showed 1 suit (or only one cuebid available)
cue = inv+ raise
raise = constr
jump cue = spl
(2N = mixed raise)
others = nat F

# we showed 1 suit, they showed 2 suits
highest cue under partner's suit = inv+ raise
other cue = inv+ 4-th suit
jump cue = spl
(2N = mixed raise)
others = nat and comp, NF

# we showed 0 suits, they showed 2 suits
case-by-case

# we showed 2 suits, they showed 2 suits:
treated as we showed 1 suit (i.e. high cue = inv fit)
```

Here are some common situations:

```
# unless specified otherwise:
XX = inv+, at least PEN in one suit
P then X = inv+, flat

1m - (X) - # recall
1N = constr+ C
2C = NF
2N = inv fit.
others = system ON

1M - (X) - # recall
1N ~ 2M-2 = transfers # to suit = usually weak
2M-1 = at least 1M - 2M
2M+ = same

1m - (2m = MMs) -
2H = inv+, om
2S = inv+ fit m # higher cue
3m/om = nat NF
```

```

3M = probably spl

1M - (2M = oM + unknown m) -
XX = inv+, at least PEN in one suit # usually PEN oM, but can be PEN
both ms!
2N = "the 2N raise" # if oM = H, then this is inv+; if oM = S, then
this is mixed raise
3m = nat F

1D - (P) - 1H - (2N = S+C) -
3C = inv+ H raise # highest cue under partner's suit
3D = NF
3H = NF
3S = GF D

# 0-vs-2 suit senarios: X and P then X are still the same!
1N - (2C = MMs) -
2D = nat NF
2H = inv, minor-oriented t/o
2S = GF, minor-oriented t/o
2N+ = transfer Leb (still need to show 5+M)
4DH = still transfers

1C/1N - (2N = mms) -
X = inv+, at least PEN in one suit. or SI with 5+M.
P then X = inv+, flat.
3C = inv+, 5+S; or inv+ t/o with 4+S
    3D = GF w/o 4S. ask
        3H = 4+H
        3S = 3S
        3S = 5+S
        3N = 5+H, 4S # need memorize!
    3H = min, usually 4+H. P/C
        P = s/o # inv
        3S = s/o # inv, 5+S, 3-H
        3N = 5S, 3-H, GF.
        4H = s/o
    3S = min NF
    3N = no 3S, no 4H.
    4C+ = 4+S fit, cuebid # 4S = s/o
3D = inv+, 5+H, usually 3-S. or GF, 5+H 4S.
[1N...] 4CDH = system ON

```

2.7.4 vs assumed-fit pres

If they open preempt, we might need more case-by-case analysis.

```

# default to Dixon defense
(2D/H = MMs) -
X = 13-15, (s)bal # then still Leb. subseq X = PEN
P then X = t/o
2H (if available) = nat
2S = t/o
2N = 16-18, bal
3m = nat
3M = nat, good hand

(2D = fertilizer/Jamming) -
X = 13-15 (s)bal; or X then bid. # then still Leb. subseq X = PEN
P then X = t/o
2M = nat
2N = 16-18 bal
3X = nat

(2N = mms) -
X = 14+ (s)bal; or X then bid. # then still Leb. subseq X = PEN
P then X = PEN
3C = t/o. S >= H.
    +1 = ask if S > H
3D = t/o. H > S.
3M = nat

# vs constr: 13-15 bal is not urgent to show
(2D = Flannery, 45xx+) -
X = 14+ (s)bal # then still Leb. adv's X = PEN
P then X = t/o
2H = t/o # Leb ON. adv's X = responsive
2S = nat
2N = mms t/o
3m = nat
3H = Western
3S = 16-18, good 6+S

(2H = Flannery, 45xx+) -
X = 15+ (s)bal # then still Leb. adv's X = PEN
P then X (if available) = t/o
2S = NF. t/o to H.
others = same

(2D = 4414, 4405, 4315, 3415) - # treated as opened 2C, since he
    usually has 5+C
X = t/o of C
P then X = t/o
2M = nat

```

```

2N = 16-18
3C = Michaels
3DHS = nat

(2H = 4414, 4405, 4315, 3415)
X = t/o of C
others = same

```

2.7.5 vs multi

Multi is hard to defend.

```

(2D = multi) -
X = 12-17, some 5+M; or 19-21 bal # subseq = same as multi
P then X = 13-15 bal or slightly off-shape
2M = t/o in M # subseq = same as (2M) - X. However, jump to 4M shall
    be natrual
2N = nat 15-18
3m = nat
3M = 15-17, 6+M

(2D = multi) - P - (P) -
X = 13-15, bal or t/o; or some stronger off-shape hand
2M = nat overcall
2N = 16-18, bal
others = same

(2D) - P - (2M/3M) - X = t/o (treated as nat pre)

1N - (2D = multi) -
X = PEN in at least one M # may be some 5M
2M = t/o in M
P then X = inv+. flat hand.
2N+ = transfer Leb

1N - (2D = multi) - P - (P/2M/3M); X = t/o

```

2.7.6 vs art fit

```

X to spl = suggest sacrifice
X to non-GF raise = t/o
X to GF raise = LDX

```

2.7.7 vs other & multi-way bids

```
unless otherwise specified, X to multi-way bids (ex: 1S - 2C = C or S)
  are LDX
XX to negative double = lead-directing
XX to responsive double = suggest not to compete
XX in other situations = general strength or lead-directing
(2N = nat) - X = MMs
```

Chapter 3

principles

3.1 misc

3.1.1 cuebids

- if no agreement, cue shows strength and at in many situations GF
- show stop if two unbid suit or opp. bid two suits, and both cuebids are available. otherwise ask stop
- if one cuebid is unavailable, assume the stopper is good

3.1.2 artificial / forcing bid interfered

- general art bid doubled: XX = suggests play. accept transfer = min (so P = mild inv). others = system ON.
- fit cue doubled: XX = Q. bid = don't worry. P = otherwise.
- two-suited bid doubled: P = pick better one. XX = suggest play.

3.1.3 unusual NT vs t/o

if unusual NT and t/o have the same meaning, then NT empathizes distrbitional hands.

3.1.4 unnessesary jump

in non-contested auction: splinter to the last real suit or ERKC. otherwise natural. however should be fit-showing above 2N for passed hand

3.1.5 forcing or not

when opp. inv+ or we are defensive side and they opened and responded, new suit tend to be NF.

3.1.6 fast arrival

fast arrival unless double jump to game after GF (1M - 2X; 2Y - 4M is a picture jump).

3.2 doubles

```
low-level double is not penalty unless:
XX set up FP
after someone doubled 1N for pen; or convert a t/o to pen
no game interest, and deny some suit (or already fit) so that t/o is
    not possible
obvious case
```

```
XX is strength / suggest play unless:
after low-level X converted to penalty: XX is SOS
3N in a competitive auction doubled # XX = plz re-consider
```

Chapter 4

defensive

4.1 overcall

4.1.1 simple

When unfavorable (or V, by judgement), we'll overcall sounder (the "traditional": either good suit with strong LD value, or 11+). Otherwise, we may overcall light with disruptive purpose.

```
# if balancing against pre, may be lighter
# for upper limit, see t/o
1X = 8-18, 5+X # may be weak disruptive, depends on position and Vul
1N = (14)15-18, usually promises stopper.
2X = 10-15, 6+X; 12-18, 5+X.
3X = (13)14+, 6+X; 15+, 5+X
jump 3Y against 2X pre = 16-18, good 6+Y
```

4.1.2 unusual

```
# 10-16, PH ON but may be a Q lighter
(1M) - 2M = 5+oM, 5+m # resp same as 2oM opening
(1M) - 2N = 55+m
(1m) - 2m = 55+M
    cue = inv+ or SI (back to 3H if min)
    2N = nat inv
    others = s/o
(1m) - 2N = 5+H, 5+om
    cue = inv+ H
(2M) - 4m = 5+oM, 5+m # Leaping Michaels
(2D) - 4C = some 5+M, 5+C
```

4.1.3 high level

```
(4m) - 4N = nat.
(4M) - 4N = minors or some 5-5.
(1m) - 3m = nat. (unless 1D = unbal)
(1M/2M) - 3M = Western cuebid. ask stop
```

4.1.4 balancing

system ON for now

4.1.5 sandwich

```
(1X) - P - (1Y) -
    1N = nat
    2X = nat (Rubens from 2Y)
    2Y = nat (no Rubens)
    after X or overcall: Y is the cuebid suit
(1X) - (2X) - 2N = unusual
(1X) - (1N) - X = t/o to X
```

4.2 t/o

```
minimum take out at 1-level: # style: slightly emphasizes major
4333: 13+
4432: 11+, 43+M or 4+oM
1-card opp's suit: 10+ outside
0-card opp's suit: 9+ outside

at 2-level: +2
at 3-level: +4
may be slightly sounder if adv will likely need to bid 1-level higher.
```

4.2.1 X then rebid

```
# here min means X then bid's min
non-jump rebid at...
    1-level: 16-19, 5+X
    2-level: 16-19, 5+X
    3-level: 16-19, 6+X; 18-20, 5+X
cue = stronger than above # if interfered, may use X = re-t/o
```

```

jump / double jump = similar range (can be slightly higher) but 6+X and
  Loser oriented
raise to 2-level = 15-18

```

4.2.2 high level t/o style

We use double very "elasticly":

- at 4S+, tend to show a strong (s)bal with good defensive tricks
- however, may also be hands that promises transferable strength, allowing partner to bid with good shape. An example is -.AQJxx.Axxx.KTxx. With stronger values, you will bid 4N for t/o.
- X to 4H tend to be more t/o-ish, compare to X to 4S+

4.3 advances

4.3.1 simple overcall (Rubens)

We use Rubens advances after 1X - overcall $\leq$ 2D. The rule is: transfer from opp's suit (skipping 2N), until 2X or 3X (direct raise).

```

(1X) - 1Y - (P)
1N = 9-11(12) nat NF, may be lighter (trying to correct contract) if
  short. sounder if partner PH.
2N = (12)13-14(15), nat inv NF # PH: mixed raise
1-suit = F1. usually 5 but may be 4.
2-suit = nat, F1, 10+
  then cue = inv+ F1, other under 2Y = nat and not promising extra
  raise = min fit
jump 2-suit = weak.
jump 3-suit = (12)13-14, nat 6+suit inv # fit-showing if PH
jump cue = mixed raise
transfer from opp's suit (2X): 10+; or 8+ with 6+ suit # 12+ promises
rebid
  transfer accepted = not max (13-)
    transfer than back to 2X = 10-13 NF, exactly 2-fit
    transfer than back to 3X = GF, 3+ fit (like 2/1)
    transfer than 2N = same as direct 2N, but with side suit
  raise = fit inv NF
  new suit = F1
  rebid = mid nat NF
  others = nat
transfer to 2Y = 10+ fit

```

```

(1Y) - 2X - (P)
2N = nat inv NF # roughly same strength as inv against opening
2W < 2Y = nat, F1, 10+ or 8+ with 6+ suit
    then cue = extra, other under 2Y = nat and not promising extra
    raise = min fit
jump 3-suit = (12)13-14, nat 6+suit inv # fit-showing if PH
transfer from opp's suit (2Y): 10+ (GF promises rebid)
    transfer accepted = min # if X: still ON, P shows slight extra and
    perhaps don't like this suit
    rebid = mild extra but NF # no space here ...
    others = nat and GF
    # transfer than back to 3X = GF, exactly 2-fit
transfer to 3Y = inv+ fit

```

4.3.2 unusual

```

if unusual show M + m => same as 2M pre open
if (1C) - 2C show MMs => same as Landy
if (1D) - 2D show MMs =>
    2N = nat inv NF
    3D = inv with some fit

```

4.3.3 t/o

```

(1suit) - X -
1X = 0-8(9), natrual length # free bid: 4+ with shape, or 6+
    raise: constr, roughly 15-18
2X = 0-8(9), natrual length
jump 2X = 8-9, 5+Z; or (9)10-11, 4+Z
jump 3X = (8)9, 5+X; or 10-11(12), 4+X
double jump = nat inv with shape # not pre!
1N = 9-11
2N = (11)12-13

(1m) - X - cue = any GF; or 44+M inv
    2M = 4+M. raise is the only NF bid
    new suit = usually 5-cards except 2S after 2H
    2D/2N+ = nat and GF. basically shows 16+. # since non-GF must have
    4M.
(1m) - X - jump cue = 54+M, good shape, mixed-raise-ish
(1M) - X - cue = any GF
(1M) - X - jump cue = Western cuebid (?)

at 2-level => (transfer) Leb

```

```

(3M) - X -
cue = some single-suited SI
    lowest suit = min
    4N = extra, waiting
    other new suit = extra, nat rebid
4N = at least two places to play, may have no extra

(3m) - X -
cue = 44+M, pick. or some strong single suit
4N = ask Ace?

```

4.3.4 NT overcall

system ON (note: normal Stayman opp 2N/3N) for now.

4.4 vs 1N

We choose the widely-used multi-Landy, and also consistent with our opening preempt. For responses, see [pre](#).

```

X = at least opp's mid-range
2C = 10+, 54+M; or 8+, 55+M
2D = 6.5-Losers or 10+, some 6+M # stronger hands can 2D then bid 3M
2M = 10+, some 5M4m; or 8+, some 5M5m
2N = nat 55m wide in range
3m = nat. vs strong: wide in range, comp; vs weak: very constructive
    (13-15), inv 3N
3M = nat pre
3N = Gambling 3NT

```

```

(1N) - 2C - (P/X) -
    XX = I have own long suit (not C)
    P = s/o in C
    2N = s/o in D # no specific reasons
    2D = ask 5M, then 2N/3m/3M = NF inv
    3m = nat GF
    3M = constr

```

4.5 interfered

If opps interfere, the responsive bids tend to be competitive and NF. Therefore, X then bid new suit becomes strong and forcing.

4.5.1 simple overcall

```

overcall - (X) -
XX = lead-directing (Hx or Hxx)
if we overcall 1X, then transfer from 1N instead (can be quite weak).
    transfer to opp's suit = 10+ without fit.
no matter we overcall in m or M, 2N = some raise # see "the 2N raise"
otherwise, system ON.

(1X) - overcall - (bid Y) -
if cue (2X) still available: Rubens ON. Otherwise OFF.
X = responsive
cue Y = inv+ and ask stopper
if mixed raise unavailable, 2N = some raise # see "the 2N raise"
bid = can be quite weak with long suit. NF

# notes:
if adv passes, then NT by overcaller is unusual.

```

4.5.2 t/o

```

# if re-doubled:
... (1m) - X - (XX) - P = pen.
... (1M) - X - (XX) - P = pick a suit

# if natrual overcalled:
(1X) - X - (M) -
    X = constr+, nat 4+M
    2M = cuebid. 3M = Western
    2X/3X = nat
otherwise X = responsive

# if transfer overcalled: basically
(1X) - X - (transfer M) -
    X = responsive
    1M/2M/3M = nat
    2X/3X = nat
    # for very strong GF hands that wants to cue instead, I think X or
    P then cue?
otherwise X/cue = responsive emphasizing strength/shape

```

4.5.3 unusual interfered

XX = I have my own suit. Others = same.

4.6 vs high level pre

Chapter 5

summary

5.1 general

We play dutch doubleton (i.e. unbal 1D) with a slightly weaker NT structure.

```
1C = 2+C
1D = unbal 5+D or 4441
1M = 5+M
1N = (13)14-16 bal
2C = 21+ bal or 22+, any; or 16+, 4- Losers
2N = 19-20 bal
4N = 65+m constr-pre
```

```
# for range, see "pre"
2D = multi, some 6+M
2M = 5M5m
3X+ = nat
3N = Gambling
```

```
# bal
11-13 => 1C then 1N
14-16 => 1N           # also includes 14-15, 5M bal
17-18 => 1m then 2N   # 1D then 2N if 5+D
19-20 => 2N           # frequent 5M
21+   => 2C
```

```
# unbal or 5M (except 14-15/19-20)
11-15 => 1X
16-21 => 1X, then Gazzilli # except if 16-17 can rebid 1M natrually
22+   => 2C
```

```
# note: we open 70% of the 11 HCPs. the general criteria for pass are:
- singleton honor
- bad controls
```

```
- also allow light opening with good hands (usually 6+ suit with good  
  honors or T9s)
```

```
# opposite the range of 11-14(15), we inv with 11 (or good 10, bad 12),  
  and accept with 13 (or good 12).
```

5.2 principles

5.2.1 general

5.2.2 defensive bidding
