Chapter 1

opening

1.1 general

We play dutch doubleton (i.e. unbal 1D) with a slightly weaker NT structure.

```
1C = 2+C
1D = unbal 5+D or 4441
1M = 5+M
1N = (13)14-16 bal
2C = 21+ bal or 22+, any; or 16+, 4- Losers
2N = 19-20 bal
4N = 55+m (often 65), 4- Losers.
```

```
# for range, see "pre"
2D = multi, some 6+M
2M = 5M5m
3X+ = nat
3N = Gambling
```

```
# bal
11-13 => 1C then 1N
14-16 => 1N           # also includes 14-15, 5M bal
17-18 => 1m then 2N   # 1D then 2N if 5+D
19-20 => 2N           # frequent 5M
21+   => 2C
```

```
# unbal or 5M (except 14-15/19-20)
11-15 => 1X
16-21 => 1X, then Gazzilli # except if 16-17 can rebid 1M natrually
22+   => 2C
```

```
# note: we open 70% of the 11 HCPs. the general criteria for pass are:
- singleton honor
- bad controls
```

```
- also allow light opening with good hands (usually 6+ suit with good
  honors or T9s)

# opposite the range of 11-14(15), we inv with 11 (or good 10, bad 12),
  and accept with 13 (or good 12).
```

1.2 uncontested 1X

1.2.1 1m

- transfer response to 1C
- 2H = reverse Flannery
- some art minor raises

```
transfer response to 1C: 1D = 4+H. 1H = 4+S. 1S = (4)5+D. # major
  first when non-GF
nat response to 1D: 1M = 4+M
1N = 6-10

1m - 2m = 8-11(12)
  suit = nat (may be stopper) and invitational
  jump = spl, SI
2S = m fit GF (PH: inv)
  suit = spl, SI
1m - 3m = pre

1C - 2D = 6+D inv.
1D - 2C = 5+C, GF. (PH: inv)
  2D = min.
1D - 3C = 6+C inv.

2H = 3-7, 5S4H+
  2N/3M = nat inv
  P/2S/3m/3om = s/o
  4C/4D = ST in H/S, then +1 = good hand
2N = (s)bal inv
  3m = NF
  1D - 2N; 3C = 55+m, s/o
  suit = spl, SI
3N = 13-15, (4333)
double jump (1D - 3HS & 1C - 3DHS) = weak 7+ card with 6-6.5 winners
```

1.2.2 1M

- $3m = \text{inv}$
- we play Kaplan-interchange after 1H, i.e. $1N = 5+S$, $1S = 4-S$
- however, $6+S$ inv will bid 1S initially, then rebid 2S regardless of opener's rebid.

```

1H - 1S = F1N-like: 6-11(12), 4-S (or 3+H); or inv, 6+S
1H - 1N = 5+S, F1
1S - 1N = SF

raise = 8-10 values
jump raise = pre # NV: wild, V: usually unbal
1H - 2S & 1S - 2N = 4+ fit, GF
1H - 2N & 1S - 3H = 4+ fit, inv # 1H - 2N subseq. same as Jacoby

2C = 2+C, FG # may have 4S
2D = (4)5+D, FG
1S - 2H = 5+H, GF

3m = nat inv
    1M - 3C - 3M = NF # use 3D for GF
    1M - 3D - 3M = GF
    new suit = GF
3N = (4333), CoG
double jump = spl # 4M-1 would be tighter, otherwise roughly 10-13(14)

```

PH

```

2C = Drury. (8)9+ fit
    2D = re-inv
    [1S - 2C -] 2H = nat inv NF
    2M+1 and above = same as after 1M - 2M, but slammish
2X = nat inv NF
raise = 5-8
2N = 9-10, 4+ fit, with short
    3C = ask, then resp spl (jump = void)
jump suit = fit-showing
spl = I think never (can 2N first), so should be very good hands (4+M
    with void)

```

1.2.3 Gazzilli

Let's introduce the concept of Gazzilli before rebid: the traditional Gazzilli applies to $1H - 1SN - 2C$ & $1S - 1N - 2C$: which shows either 16+ or 6+M. For response, 2D is artificial, F1 that shows 8+ (GF against 16); while other bids are 7- and natural. The only exception are limit raise, $1H - 1S$; $2C - 2S = 6+S$ inv, and $1S - 1N$; $2C - 3H = 1-S$, 6+H inv. (side note: for weak hand, usually bid 2M with 2+M (or even 1M if no good suit). otherwise, bid 2H/3m. or 2N = probably mms. jump 3H shows weak but 7+ suit) The main advantages are:

- free up spaces for shapely hands
- 6+M GF hands can now bid 2C first (1M - 1N - 3M still 15-17 6+M or weaker with longer M)

For minor opening, Thanks to transfer response & unbal 1D, $1C - 1DH - 1S$ & $1D - 1M - 1N$ are empty. Notice that these are very suitable for Gazzilli, since it is a two-under bid for 2m. Therefore, we similarly define it to be either 16+ or weak unbal (i.e. the natural 1m - 1M - 2m). The responses are similar:

- +1 = art, 8+ (except the following) and others are nat and weak (2N ?)
- since $1m - 2H = 3-7$ reverse Flannery, $1D - 1S - 1N - 2H$ & $1C - 1H - 1S - 2H$ shows 8-10, 5S4H+
- others = (absolute) s/o

opener's 1m - 1M plan in brief

other unmentioned bids are quite natural.

- 4+M fit → always show first. (note: the only fit we won't show first round is GF fit after $1H - 1N^*$)
- 4+M fit min bal → $1C - 1DH^* - 2M$
- 4+M fit min unbal (11-13(14) w/ short or 11-14 5m4M22) → $1C - 1DH^* - 2D^*$ and $1D - 1M - 2M$
- 4+M fit mid+ spl (good 14+) → new suit between 2M - 3M are minispl. $1D - 1M -$ [lowest minispl] may be 15-16 5M4m22 (ask with +1 - back to 3M = 5M4m22)

- 4+M fit mid w/o spl (15-16 5m4M22 that didn't open 1N) → 1C - 1DH* - 2D* (will rebid after 2M) and 1D - 1M - [lowest minispl]
- 1m - 1M - 2m = (13)14-15, good 6m, 0-3M
- 1m - 1M - 3m = (15)16-17, good 6m, 0-2M
- all other unbal goes to Gaz, then ...
- if Gazzilli accepted (... Gaz - Gaz+1), then back to 2m (2-M or sometimes 6+m) and 2M (3M fit) shows min unbal.
- if Gazzilli accepted (... Gaz - Gaz+1), boring 16+ hands just simply use *the waiting bid*. otherwise, other bids usually shows shapely and slam interest.
- if Gazzilli not accepted and 2M available, back to 2M shows (15)16-17, good 6m-3M. jump 3M = GF, good 6m-3M.
- if Gazzilli not accepted and resp back to 2M, raise 3M = inv
- if Gazzilli not accepted, 3m is always 6+m and GF

subseq after Gazzilli accepted

16-21 pts is still wide, and as responder he will want to know the shape and at least a "cut" (ex: 19+ or not) for the opener if he has slam interest. Here I proposed a simple method: exchange the lowest new suit with 2N, showing a waiting hand, and after that, the responder can freely bids natrually at the two level or 2N as a waiting bid. This achieves a similar effect as 2-over-1 (i.e. after 1M - 2m, 2M is catchall, and then 2N is another waiting; not waiting but bid in 3-level shows SI). The waiting bids are shown here:

```
1C - 1D*; 1S - 1N; 2D
1C - 1H*; 1S - 1N; 2D
1D - 1H ; 1N - 2C; 2S
1D - 1S ; 1N - 2C; 2H
1H - 1S*; 2C - 2D; 2S
1H - 1N*; 2C - 2D; 2S**
1S - 1N*; 2C - 2D; 2H
```

**this is an excpetion: because most fits will not be in Gaz (only GF fits will), we should not save space for it. This also mean that 1H - 1N - 2C - 2D - 2N = 18+, 3+S.

1.2.4 rebids

Finally, I'm going to dive quickly into the most common responses of the opener's rebids:

1.2.5 1m - 1M

```

1m - 1M(-1);

1C - 1D - 1H = 11-17, 4+S # then 1S = 3+S to play, 2S = 8-10 fit, 3S =
    inv, 2D = art GF
1C - 1DH - 1S = Gaz # 18+ usually hide 4S first
1C - 1DH - 1N = min bal # then 2-way pcb
1D - 1H - 1S = 11-17, 4+S # then 4SGF**
1D - 1M - 1N = Gaz # 18+ usually hide 4S first
1D - 1M - 2C = min nat

rebid 2m = (13)14-15, good (two of AKQ) 6+m. can be weaker if longer m
    # then 2M = F1
rebid 3m = (15)16-17, good (two of AKQ) 6+m 2-M. can be weaker if
    longer m
    1C - 1DH - 3C - 3D = GF checkback, 3M = NF
    1D - 1M - 3D - 3M = 6+M GF
rebid 3N = (semi)solid 6+m, usually to play
rebid 2N = 17-18 bal

# for fits: always show in first round
1C - 1DH - 2D* = min unbal 4M fit; or 15-16 5m4M22
1C - 1DH - 2HS = 11-13(14), 4M fit and bal # for right-siding
1D - 1M - 2M = 11-13(14), 4M fit and unbal
jump & jump reverse = inv+ (14+), spl; or 15-16 5m4M22 for the lowest
    minispl
double jump = GF, void spl (4m = 6+m, 4+fit)
1m - 1M(-1) - 3M = (16)17-18 bal, 4+M (16 is probably better 5m4M22)

# reverse
1C - 1H - 2H = 10-13, 6C5H+, NF
1D - 1S - 2H = 10-13, 6D5H+, NF

** If you want, it is also possible to use PLOB (4SF1)

```

1.2.6 1m - 1N & 1C - 1S

```

1C - 1S - 1N = 11-13 bal, no 3D unless (4333)

```

```

    2C → 2D (then 2N/3C = inv). 2D = inv. 2M = (3)4+M GF. 2N → 3C.
    others = GF
    # notice that 1C - 2D = inv
1C - 1S - 2C = min nat, 2-D
1C - 1S - 2D = min, 3+D
1C - 1S - 3C = 15-17, good 6+C inv NF
1C - 1S - 3D = 15-17, good 3+D inv NF
1C - 1S - 2M = nat 16+
    [M = H] 2S = min, ready to pick preferences
    [M = S] 2N = min NF, opener's only forcing bid is new suit

1m - 1N - 2m = min nat
1m - 1N - 2M = nat 16+
    [M = H] 2S = min, ready to pick preferences
    [M = S] 2N = min NF, opener's only forcing bid is new suit

```

1.2.7 1S - 1N & 1H - 1SN

```

1H - 1SN & 1S - 1N
2C = Gazilli. 11-15, 6+M; or 16+ # can be weaker if want GF opposite
8+
2D = 4+D, 8+
2M = 11-15, 5M, (2)4+C # it is rare to have bal here, since either
    passes F1N or opens 1N, however, 1H - 1N - 2H unavoidably would have
    min bal
jump new suit = concentrated 14-16, 5-5
2N = concentrated 14-16, some 6-4
    3C = ask # then 3M = 6M4C
    3X = NF # 3C then bid = GF
3M = 6+ good M, 5.5 Losers # roughly 14-17. basically, Gaz then rebid
    3M = GF
    new suit = cue
3N = solid M, roughly 6M 15-17, can be slightly weaker if longer
# after 1H - 1N, should show fit unless GF

# different sequences
1S - 1N - P = 11-12(13) bal (against 1N)
1S - 1N - 2H = 11-15, 4+H

1H - 1N - 2S = simple raise
1H - 1N - 3S = inv raise
1H - 1N - 4X = 4+S, spl (GF minimum)
1H - 1N - 4S = shapely raise (a bit of gamble)
1H - 1N - 2N - any - 3S = inv raise but with shape (usually 4+S unbal)

```

```

1H - 1S - 2S = 14-16, concentrated 6H4S+ # then 3H = s/o, others = nat
GF
1H - 1S - 1N = 11-15, 2-4S # type 1: min bal, type 2: 5H4S
    2C = ask, either inv or with 4S
        then 2D = no 4S; 2H = 4S, min; 2S = 4S, max.
    2DH = s/o
    2S = 6+S inv
    2N = no agreement!
    3C = s/o # 1H - 3C already inv
# notice that this is easy because 1S is lower than GF

```

1.2.8 2/1, and nebulous 2C

We use the "2/1 always GF & nebulous 2C" approach, where all balanced GF hands without 5D/H starts with 2C so that 2D/H promises 5+ card. (4441 usually starts with 2D, because its tolerable to bid D with a fit anyways)

For response to 2/1, I suggest slightly modified from the "2M default" system: (where extra = about a K more than the minimum)

```

# same sequences
1M - 2X - 2N = 6+M without 4oM, any strength # usually no extra,
    unless 15-17 with bad 6+M
1M - 2Y - 3X = nat extra
1M - 2X - 3Y = good 16+, 5-5 slamish
1M - 2X - 3N = (15)16-18, exactly 5M332fit
1M - 2X - 3M = 15-17, good 6+M

# raises
1M - 2D - 3D = 4+ fit (not promising extra); or 3+ fit with extra
1S - 2H - 3H = 3+ fit, extra. 4H = 3+ fit, min. # do we want to put
    this in 2S?
1M - 2C - 3C = 4+ fit, extra

# side suit
1H - 2D - 2S = extra, or 6H4S
1S - 2D - 2H = always show 4H, not promising extra
1M - 2C - 2oM = always show 4oM, not promising extra
1M - 2C - 2M = extra with 4+D

# default bid
1M - 2DH - 2M = catchall: min unbal/bal, or rarely 19+ bal (will quant
    later)
1M - 2C - 2D = catchall: min unbal/bal (no 4oM), or rarely 19+ bal (
    will quant later)

```

For subsequent sequences, here are the principles:

```
# same sequences
1M - 2X - 2N = 6+M without 4oM, any strength
1M - 2Y - 3X = nat extra
1M - 2X - 3Y = good 16+, 5-5 slamish
    # for above: bid natrually with fast arrival. reverses may just
    indicate strength.
1M - 2X - 3N = (15)16-18, exactly 5M332fit
    4X = SI, please RKC unless min
    4N = quant
    reverse = usually cue, fit in M, ST
    1S - 2H - 3N - 4C/D* = ST in H/S # very hard to memorize!
    1M - 2D - 3N - 4C = natrual, 55, ST
    1H - 2D - 3N - 4S = RKC

# raises
1M - 2D - 3D = 4+ fit (not promising extra); or 3+ fit with extra
1S - 2H - 3H = 3+ fit, extra. 4H = 3+ fit, min. # do we want to put
this in 2S?
1M - 2C - 3C = 4+ fit, extra
    # for all above
    3N = min, s/o # then 4m = MST, 4m+1 = RKC
    4m = mild slam inv
    3M = 3+ fit with mild extra, then # +1 = FF as always
    [after C double fit] resp's next bid 4C shows real 5+ suit (not
    denying control under that), and therefore 4D = 2RKC. if
    unfortunately the sequence went 1M - 2C - 3C - 3M - 4C, then just 4M
    +1 RKC (giving up 2RKC), then optionally play in 6C instead.
    [after D/H double fit] 4H/4N is 2RKC.
    4M = dead min
    others = stopper-related, but can be cuebid before ST
    # cuebid first so that kickback RKC is clearer. jump new suit may
    be treated as auto-splinter

# side suit
1H - 2D - 2S = extra, or 6H4S
1S - 2D - 2H = always show 4H, not promising extra
1M - 2C - 2oM = always show 4oM, not promising extra
1M - 2C - 2M = extra with 4+D
    # for all above
    if 2M/oM is available: 2M/oM = fit, 3M/oM = almost slam-force. 4M/
    oM = min, picture bid
    if not: 3M/oM = extra. 4M/oM = min (fast arrival)
    2N = waiting bid
    4-th suit = weakish ask for stop (opener treated as this), or nat
    65 and will promise rebid
    rebid 3m = 6+m, extra # ?
```

```

# default bid
1M - 2DH - 2M = catchall: min unbal/bal, or rarely 19+ bal (will quant
  later)
  1H - 2D - 2H - 2S = nat, not promising extra
  2N = waiting and SI (or at least CoG), then bid natrually
  non-reverse 3X = nat 5-5 SI
  rebid = nat SI
  reverse 3X = weakish ask for stop (opener treated as this), or nat
  65 and will promise rebid
  3N = to play
  3M = SI against min. 4M = to play (fast arrival)
1M - 2C - 2D = catchall: min unbal/bal (no 4oM), or 16-18 5M3fit32, or
  rarely 19+ bal (will quant later)
  2M = fit SI (not sure bal or not). 3M = almost slam-force. 4M = s/o
  2oM* = unbal-ish. may be asking for stopper or SI. then bid
  natrually.
  2N = bal-ish waiting and SI, then bid natrually
  rebid = nat SI
  reverse 3D = nat and SI
  reverse 3H = no agreement. maybe 65
  3N = to play

# responder's jump bid
# the following are auto-splinters, showing (15)16+ values and usually
  4 but can be 3-fit
1M - 2DH - 2M - jump
1M - 2C - 2D - jump
1M - 2X - 2N - jump
1M - 2X - 2oM - jump

```

1.2.9 notes

after Gaz's weak 2m

Although we say "same as natrual", but we shall clarify a bit:

```

# 1C - 1DH* - 1S* - 1N* - 2C
2D = art GF, may or may not have D
  2M = 3M. 2oM = 4M. 2N = nat. 3C = 5+C.
[M = S] 2H = nat inv NF # natrual system usually play as 8-10, but we
  excluded it
[M = H] 2S = GF
2N = inv
3C = inv
3D = 5-5 inv

```

```

[M = S] 3H = 5-5 inv # therefore 2D then 3H = 5-5 GF (4H will know fit
or not after 2D)

# 1D - 1M - 1N* - 2C* - 2D
[M = S] 2H = nat inv+, F1
[M = H] 2S = GF
2N = inv
3C = art GF
3D = inv
[M = S] 3H = 5-5 inv

```

2-way

```

1C - 1M-1 - 1N
2C = transfer 2D. s/o or inv
    2D = forced. max with 3M can anti-transfer to 2M.
        P/2X = s/o. 2N = inv. 3m = nat inv, deny 5M. 3N = 5M(332) CoG.
        [M = S] 3H = 5-5 inv
    2M = max, 3M fit
2D = GF ask.
    2M = nat. 2N = default. 3m = nat, medium+ suit.
2X = nat inv NF.
2N = transfer 3C. s/o or CoG with spl.
    P = s/o.
    bid = spl the bid suit (3M = spl C). opener can use +1 to
    distinguish 4M or 5M. 3S/3N show the same spl but 5/4-card.
3X = nat ST.
4X = 7+M, spl

# OFF if interfered, except after 1C - (1D) - X/1H = system on
# PH ON except 2D/3X = nat inv

```

1m - 2N rebid

```

# 1m - 1M(-1) - 2N
3C* = ask 3M, otherwise puppet to 3D. may be s/o so should not exceed 3M
# either s/o in D/M, or most 5(+)M GF, or 6+m ST
3D = no 3M
    P/3M/4M = s/o
    oM = natural, GF, 5M 4oM
3M = 3M
    P/4M = s/o
    3M+1 = FF in M. oM = ST
# no matter 3D or 3M:
[m = C] 4m = nat 6+ cards, ST

```

```

[m = D] 4C = 6+C, ST.
3D* = minor-oriented ask # we assume no 5m4M ST will initially bid 1M
[m = C] act as minor Stayman. therefore 3H = 4+C (then 3S = 4+D). 3
S = 4+D. 3N = 4oM333.
[m = D] simply fit D SI, then cuebid (3N = FF)
3M = 6+M, slam interest
[M = H] 3S = 44M
[M = S] 3H = 55M
3N = s/o
4m = 5-5, SI
+1 = 2RKC
4N/4M/5m = s/o
4M = s/o

# 1C - 1S - 2N
3C = puppet to 3D. s/o or spl
P = s/o. bid = spl
3D = nat SI, then cuebid (3N = FF)
3M = nat 4+M, therefore should originally be GF (i.e. SI now)
3N = s/o

```

Jacoby 2N

3-level = short, 4-level = long (usually promises all side controls). At anytime:
 3M+1 = non-serious.

If overcalled: P = nothing special, X = suggest PEN, 3M = stolen (i.e. the original bid is unavailable now), others = system ON

minor invite

We have many minor invites, no matter after 1m, 1M, or 1N. You expect partner to accept with: not-too-bad 12 with Hx+ fit, or good 13 otherwise. That is, with honor support, you can accept with lighter hand compare to normal invite; otherwise, you should be sounder. The reason is, with (22)23 points and 6-card running suit, 3N is very close. However, with one tempo missing, you'll have a harder time against good opponents.

The next question is, what should invitational hand's strength be: in my opinion, it should be:

- (9)10, or bad 11 points.
- can be lighter with 7+ suit

- must have good honors (roughly 2-of-top-3, or 3-of-top-5), but *usually not solid*, since in this case opener would never have honors

difficult sequences

Here I list some sequences that is easily confused (as inv):

```
# raise of 2-level inv is SI
1m - 1M - 2m - 3m = SI
1H - 1S - any - 2S - 3S = SI
1C - 2D - 3D = SI

# other
1D - 2H - 3C = 55+m, s/o
2C - 2D - 3N - 4C = normal Stayman
1H - 1N - 2C - 2D - 2S = waiting
```

1.3 1X interfered

Unless explicitly said "subseq ON", subseq is OFF.

1.3.1 vs t/o

Please notice that after XX, it is a FP (to 2N) scheme so that X is PEN.

```
# minors: (1N → 2C; 2N is fit inv; others unchanged)
XX = inv+. FP ON.
P then X = inv+, flat shape. FP ON.
1X system ON. subseq ON if no interference.
1C - (X) - 1N = transfer to C, constr (about 8-9(10)) C suit. Accept
    transfer = no extra
1D - (X) - 1N = transfer to C, good constr+ (about 9+) C suit. Accept
    transfer = no extra
2C = nat weak
2DHS = system ON. (but 1D - 2D excludes inv+ 4+ fit)
3X = system ON
2N = inv 4+ fit # 5+ for C

# majors: (big changes: transfer from 1N)
XX = inv+. FP ON.
P then X = inv+, flat shape. FP ON.
1S = 4+S nat (then NO Gazzilli, support double ON).
transfer from 1N, showing a weak hand (5)6+ cards suit and 6+. Accept
    transfer = no extra. After transfer, back to 2M = 2+M, inv. Others =
    nat. new suit = GF. # opener treat this as a weak-two strength
```

```
2M-1 = good constr+ (~Drury range i.e. 9+) raise. 2M = (4)5-8 raise
2M+1 above = system ON
```

1.3.2 vs 1-level overcall

I've considered *italian style*, but maybe later.

```
1C - (1D)
  X/1H = 4+H/S. subseq ON if no interference. support X ON.
  1S = constr+ without stopper and M.
1C - (1H)
  X = 4+S. subseq ON if no interference. support X ON.
  1S = constr+ without stopper and S.
1C - (1S)
  X = 4+H. 2-way ON. support X ON.
1D - (1H)
  X = 4+S. subseq ON if no interference. support X ON.
  1S = constr+ without stopper and S
1D - (1S)
  X = 4+H. subseq ON if no interference. support X ON.
1H - (1S)
  X = negative (44m+, may be off-shape if stronger)
# same:
  1N = nat.
  raise = 6-9(10)
  cue = inv+ raise
  non-jump 2X = nat 5+X F1
# 1m - (1X)
  jump 2M/3X = nat weak
  2N = nat inv.
  3X = system ON
# 1H - (1S)
  2N* = mixed raise
  2S = inv+
```

1.3.3 vs 2-level overcall

```
2X = nat 10+ F1. non-jump 3X = nat GF
jump under 4M = spl
X = neg
# for minor
2N = nat inv
cue = inv+ raise
# for major
2N & cue = raises, see below
```

1.3.4 the 2N raise

In the following situations:

- partner opens or overcalls 1M (or non-jump 2M)
- is then overcalled $< 2N$ (not doubled)
- (we are overcaller) the original mixed raise no longer exists. i.e. (1X) - 1M - (2X or higher)
- (we are overcaller) advancer is PH so he is not possible to inv with 2N (thus jump cue = nat fit-showing)

2N is artificial and showing a raise. It shows:

- if this is the only raise under 3M (i.e. ... 1H/2H - (2S)), it shows inv+ raise
- otherwise, among 2N and cue, higher = mixed raise, lower = inv+ raise

We use the higher as mixed raise because it is semi-preemptive.

mixed raise

mixed raise, showing a less-than-inv constr 4+ fit. which means:

- 9-11 for overcalling
- (7)8-9(10) for opening

1.3.5 neg X and continuation

As above, since we used 2N artificially, we need to put bal inv into neg X. Specifically, neg X can contain:

```
# default shape: (off-shape allowed if extra)
0M bid: 44+M
1M bid: 4+oM
2M bid: 44+m
# strength minimum for default shape
your showed suit can be bid at 2-level: 8+
your showed suit need to be bid at 3-level: 10+

X then bid = less than free bid strength, some (6)5+ suit # so, for
example, 1C - (3D) - X - 4H - 4S is NAT
```

```

any inv that cannot bid naturally (w/ or w/o stopper)
# inv w/ stopper: rebid 2N
# inv w/o stopper: you may need to raise M/m with 2-card
# GF w/ stopper: rebid 3N
# GF s/o stopper: cue (but may be ST)

# X to 3S (and sometime 3H) tend to ask stop

```

For opener's rebid, some notes:

- since there are too many non-default cases, don't jump to 4M with GF M fit unless there are no space. you should cuebid or X first.
- good-bad is ON if: 1S - (2H) - X, or after negative X vs jump overcall
- otherwise, 2N shows extra and stoppers, 3X shows extra and no fit
- bid under 2M is natural and usually not GF (but does not deny extra)
- 2M is default, i.e. does not promise extra length

1.3.6 vs later overcalls

Here are some general notes if overcalled in later auctions:

```

1C - 1DH or 1D - 1M => support (re)double under 2M
if doubled, then most systems ON. if overcalled, then most system OFF.
(just bid naturally and cue = F1 or GF depends on level)
if Gaz is overcalled, then subseq OFF, and responder treated as the "
weak case". the strong case will show itself.
low level double usually shows t/o unless FP ON, or t/o is impossible.

```

Some specific cases:

```

1H - 1S - (X)  # don't system ON
P = 4+S
XX = 16+ (subseq nat)
1N = 11-13 bal
2X = 11-15 nat
2S+ = system ON

1H - 1N - (X)
P = 11-13 bal or bad unbal
XX = 16+ (subseq nat)
2X = 11-15 nat
2S+ = system ON

```

```

1S - 1N - (X)
  P = 11-13 bal or bad unbal
  XX = 16+ (subseq nat)
  2X = 11-15 nat
  2N+ = system ON

```

1.3.7 TBD

just a quick note: if we are overcaller, then Rubens is ON if overcalls $\leq 2D$, and is passed. (in this case, transfer from opp's suit) Rubens is ON if overcalls 2m, and is doubled. transfer from 1N if doubled: transfer to opp's suit shows 10+ and no fit. either way, jump = fit-showing, about 9-11 values, jump cue = mixed raise, also 9-11 values All other unmentioned cases, we bid natrually for now.

1.4 1N

Although 1N opening is 14-16, overcall is still 15-18. For response to overcall, we can play system on for now, and Gladiator later.

```

1N -
2C = ask 4M, may be 5S inv or Garbage (promises 4M unless 5m ST)
  1N - 2C - 2D - 3H/3S/4C/4D = 5S/5H/6H/6S
  1N - 2C - 2M - 3oM = ST # higher = spl
  1N - 2C - 2M - 3m = 5m, ST
    [M = H] 3H = 5H. 3S = nat 4S. if available, 3D = fit and ST (
then 3N = FF)
    [M = S] 3S = 5S. 3H = fit ST. if available, 3D = nat 5-card
  1N - 2C - 2D - P/2H = Garbage
2D/2H/4D/4H = transfer 2H/2S/4H/4S # transfer minor promises 6+m
  super accept after 2DH: 3M = 5+M, suit = Ax/Kx, 2N = others
    then 3M-1 = re-transfer
  ... 2S - 3H = 55+M, inv. NF.
  ... 2M - 3m = 4+m GF # may be CoG so don't bid over 3N
    3M = fit. 3oM = fit m. if available, 3D = nat 5-card. 4m =
double fit (then 2RKC).
  ... 2S - 2N = GF, bal CoG or ST
  ... 2H - 3S = spl or ST # then 3N = waste in S
  ... 2M - 4X = spl # 5-5 GF → Smolen
  ... 2H - 2S = 5H4S, inv NF
2S = transfer 3C
  2N = accept 6+C inv. 3C = decline.
    P/3C = s/o. suit = spl.
    ... 2N - 3N = s/o. ... 3C - 3N = CoG or mild ST
2N = nat inv

```

```

3C = transfer 3D. s/o or GF
... 3D - 3N = CoG or mild ST. suit = spl.
3D = nat inv NF
3M = GF, spl M, 54+m
oM = good oM. 3N = s/o. 4m = preference.
3N = s/o
4C = 55+M GF # Since 55 CoG => Smolen, this is SI
4M = min.
4D = max.
4H = s/o, pick one. 4N = 2RKC. 4S = ?
4S = maybe 65+m ST
4N = s/o
4N = quant
if max: 5X = 4-card (if 5-card, bid again), 5X = 6-card
5m = s/o
5N = inv 7X

# if we want puppet Stay, then bal inv → 2C (NOT NOW)

```

1.4.1 if doubled

Also applied to overcall 1N.

```

1N - (X = pen) -
P = s/o # allow escape
(P) - XX = I have 5-card suit (usually not solid, or just pass).
You can P/C with 2C or P.
XX = single-suited, transfer to 2C
2CDH = 4-4 suit and higher, 2C may be scramble
2N+ = (transfer) Lebensohl

1N - (X = art) -
XX = bal inv+
2N → 3C = Leb
others = system ON

```

1.4.2 interfered

```

1N - (2C = nat) - X = stolen, others = system ON
1N - (2DHS = nat) - X = t/o, 2X = nat NF, 2N+ = transfer Leb
1N - (2N) => see UvU
1N - (higher) - X = t/o-ish, bid = GF

# vs art:
1N - (2C/D = MMs)

```

```

2N = normal Leb (since no need for transfer Leb). 3m = nat GF
2H = art GF. 2S = art inv
3M = 54+m, spl # normally, it's 6+ good M, but we have Texas
4DH = still transfers
1N - (2C = some suit) - X = stolen, others = system ON
1N - (2D = some M) - X = GF, 2N+ = transfer Leb

```

1.5 2C

We use control-showing response (i.e. A = 2, K = 1) after 2C opening. The rest are simply natural except:

- after any 2N, we use response same as 2N opening
- cheaper minor = double negative after 2C - 2D - 2S/3C
- jump response shows a "one-loser suit" (KQJTxx+) without outside CT.

```

2D = 0-1 CT
2H = 2 CT. 2S = AK. 3C = 4+ CT, forcing to 4N
    then nat. bal usually still 2N. will deny bidding NF bids if too
    strong
    # ex: 2C - 2S; 2N - 3C; 4m/4N = nat w/o 4M, strong slam interest
    # 2C - 3C; 3N/4N - 4C/5C = ask 4M, 4DH/5DH = transfer
    # TODO: what is 3N ?
2N = KKK
    then same as 2N opening
3DHS = 7+ suit, about 6-6.5 tricks. usually no outside CT. 3N = same
    for C.

```

1.5.1 2C - 2D

```

2C - 2D;
# note that 21-24 bal can contain 5M
2H = nat or 21-22 bal
    2S = forced
        2N = 21-22 bal. 3N = 5+H, 25-27 bal
        bid = nat
    anti-relay: 2N = 6+S. others = nat long suit.
2S = nat unbal or 25+
    3C = weak or waiting
2N = 23-24 bal. 3N = 25-27 bal ...
    ... 3N - 4C = ask 4M. 4DH = transfer

```

1.5.2 interfered

```
# direct seat: generally P = stolen, X = worse
(2D) - P = 1 CT, X = 0 CT
(2H) - P = 2 CT, X = 0-1 CT
(2S) - P = 3 CT (AK), X = 0-2 CT
(2N+) - FP. X with 0-1 CT or 0-6p

# 4-th seat:
FP. X = suggest PEN.
```

1.6 2N

We play Muppet Stayman. (almost same as puppet, just exchange the direct 3H and 3N)

```
3C = ask 5M. may be 5+m ST.
  3D = some 4M
    3H = 4+S.
      3N = 4H, no 4S. (then 4m = nat ST, 4S = RKC)
      others = nat cue.
    3S = 4+H, no 4S.
      3N = no 4H. (then 4m = nat ST, 4S = RKC)
      others = nat cue.
    3N = s/o.
    4m = no 4M, nat ST.
  3H = no 4M
    3S = 5+S. 3N = s/o. 4m = nat ST.
  3S = 5+S
    4H = ST. 4m = nat ST.
  3N = 5+H
    4S = RKC. 4m = nat ST.
  # After 4m = nat 5+m ST:
    4N = no fit**. +1 = RKC. 5m = min (bad controls) fit.
3D/H = transfer
  4+ fit must super-accept. 4M = 5M. suit = Ax/Kx. 3N = others #
  similar to 1N
  ... 3H - 3S = 5H4S+. then 4C/D = good fit in H/S. # if 55+M s/o,
  just rebid 4S
  ... 3S - 4H = 55+M, ST. then 4N = 2RKC # note: this is still NF.
  so if really need to force to slam, you may need for example
  transfer 3H, bid 3S, and bid 5N over 3N.
  ... 3M - 4m = 5M5m+, ST. then lowest new suit = 2RKC
3S = minor Stayman
3N = s/o
4C/D = transfer 4H/S, slam interest # s/o hands transfer 3M first
```

```
+1 = max
4H/S = 6+C/D, RKC
5N = inv 7X
```

```
**note: a harder approach is +1 = no or bad fit and others = resp to
RKC. However I think it is too complex.
```

1.6.1 interfered

```
2N - (3DHS) - X = t/o, others = nat and F
2N - (3C) - X = Stayman, others system ON
2N - (4X) => FP ON, so X = PEN

if 4C available: 4CD transfer 4HS
else if 4D available: 4DH transfer 4HS
else 4H/S = nat s/o (P then bid = stronger)
```

1.7 preempts

In this section, we shall discuss the range and responses to opening preempts or direct jump overcalls. Here are two main "dimensions" to properly describe a preemptive hand:

- defensiveness: the expected tricks when defending, for example, general HCP
- offensiveness: the expected tricks when preempting, for example, shape and KQJT in long suit

In general, a preemptive range can be defined as a subset on the defensiveness-offensiveness plane.

- defensiveness: the expected tricks when defending, for example, general HCP
- offensiveness: the expected tricks when preempting, for example, shape and KQJT in long suit

1.7.1 style

After some advices and top-player's play, I think we'll use the following approach:

- baseline: preempts follows 2-3-4 rule and shows 6+ cards.

- seat adjustments:
 - opening soundness: 2nd > 1st > 3rd
 - jump overcall soundness: 2nd > 1st > 3rd
- Vul adjustments:
 - V/NV: 3X always promises 7-cards
 - V/V: 3X usually promises 7-cards
- 3+ level can be lighter with less defensiveness or more offensiveness. but 2-level usually won't unless partner PH.
- We compensate this with a lighter and wider overcall range.

1.7.2 2-3-4 rule revisited

The 2-3-4 rule is a good starting point to discuss. I suggest the following modification according to vulnerability and seats:

	V/NV	V/V	NV/NV	NV/V
1st open	2	3	3	4
2nd open	2	3-	3	4-
3rd open	2+	3+	-	-
overcall	2+	3	3	4
overcall (partner PH)	2+	3+	-	-

The color indicates situations where we might preempt with 5-cards:

- **green** NV 3-rd seat opening will be frequent 5-card.
- **blue** occasionally random weak 5-card (especially 2S). but partner usually treat as a normal 6-card preempt.

1.7.3 opening pre

We use multi + Muiderberg, which is consistent with our defense to 1N. The number of cards promised for multi follows the above table, and the number of minor cards promised for Muiderberg is always 5-5.

```

2D = pre, some 6+M
    2M/3M/4H = P/C
        # after 2S, 3H = min H, others = mid+ H, feature
        # 2D - 2H - 2S - bid = fit S, subseq same as 1S - 2S
    P/3C/4S = s/o
    2N = inv+ ask
        3C/D = mid+, H/S # then +1 = re-inv
        3H/S = min H/S
        3N = some solid M
    3D = some

2M = pre, some 5M5m
    2S = 6+S, NF # very mild encouraging, probably only raise with 3S
    2N = inv+ ask
        3C/D = min nat
        3H/S = max C/D
            new suit = nat GF
    3C = P/C
    3D = inv+ fit
    3M = pre
    3oM = nat 6+oM inv NF # so GF uses 2N first
    4CD = spl
    4HS = s/o

# vs 1N, some adjustments are made (can be relaxed a bit if PH or
# partner PH)
2D = 10+, 6+M; or 8+ if really good shape
2D - 3C = NF but mild inv
2M = 10-15, 5M4m; 8-15, 5M5m
2M - 3M = constr raise

```

1.7.4 opening pre interfered

```

2D - (m) - X = PEN # if (1N), then t/o and inv+
2D - (NT) - X = PEN # if (1N), then inv+
2D - (bid) - 2M/3M/4H = P/C
2D - (M) - X = P/C, tend to inv # otherwise just guess oM
2D - (2M) - 2N = nat inv NF # ?
2D - (bid) - m = nat inv NF
2D - (X) - bid = system ON, P = s/o, XX = start Head-hunting
2M - (bid) - X = PEN # if (1N), then P/C
2M - (X) - bid = system ON, XX = start Head-hunting
2M - (2S/2N) - 3C = P/C

```

1.7.5 after partner's pre vs 1X

We simply plays natrual (2N = nat inv, cue = inv+ raise) responses.

1.7.6 notes

```

3D - 4C = RKC
3X - new suit = GF. please bid 3N if no fit (even no stoppers)
3C - 3D = ask 3M. This allows 3C - 3M = 6-cards.
    3H* = no 3M!
    3S = 3S
    3N = 3H
    4D = 33+M
pre - (bid) - X = PEN
3N - 4C/5C = P/C
3N - 4D = RKC
3N - 4M = s/o

```

- jump to 4M = s/o except after multi 2D - 4H
- After preempt, sometimes psychic new suit or 3N, or just lead-directing.
- 4M opening may be made with 5 or fewer Losers (especially in 3rd seat). In this case, the opener will double if interfered to show "my 4M is to make".

Chapter 2

conventions

2.1 Forcing Pass

2.1.1 Forcing Pass

```
FP on if GF
FP if a non-rejected inv(+) forcing bid is interfered below the forcing
    level
after 2C opening
after 2N opening interfered to 3N+
low level natural XX FP on until 2N
(2X/3X/4X) - P - (5X) - FP on if not PH
(2X/3X/4X) - bid/X - (5X) - FP on
# however, not necessarily FP on after a pen X or converted pen X
```

2.2 game (slam) try after 2M fit

We probably agree that short-suit game try and help-suit are very helpful. Also, Jacoby has told us slam with long side suit is also important. I think it's very easily combine these into a Jacoby-2N like structure:

```
sure fit in 2S -
2N = ask, help-suit GT-ish
    3X = help in X # void/x/xx/A/K/Q
    3S = min, scattered values
    3N = max, scattered values
    4X = spl
3X = short suit GT/ST. No interest in CoG. Only cares about waste in X
    (or extra trumps)
3S = 6+S inv, but semi-pre
3N = CoG # jump to 3N is CoG. otherwise 3M+1 = FF
```

```
4X = 5-5 or 4-6, ST
```

```
# for 2H: 2S = ask, and exchange the meaning of 2N and S
# if resp promises (usually) unbal (i.e. 1D opener), then after ask: 3X
  = spl, 4X = void spl
```

2.3 Lebensohl-ish, and good-bad 2NT

2.3.1 Lebensohl

It is widely agreed that distinguishing ranges using 2N as artificial (i.e. Lebensohl) is very beneficial. However, we need to define the "cases" carefully:

- this only applies to advancer or responder
- forced 2N by t/o = normal Lebensohl
- (P/bid) - 1N - (2X) - 2N or (1Y) - X - (2X/2Y) - 2N = transfer Lebensohl. (because these are free bids)
- t/o twice, or resp shows 0-5, or t/o'er passed, 2N = scramble
- other free 2N = nat unless otherwise specified

```
# normal Leb: ... (2X)
2Y = NF
2N → 3C = min, or GF with stopper # min: 0-7(8) for (almost)
  unlimited, 0-4 for 0-7 (i.e. failed to neg X)
  # anti-transfer: GF even against min range
  3X = s/o
  3cue = 4oM (or some 4M) with stopper
  3N = stopper
  3Y = nat inv NF #
  # if interfered: X shows the above hand and tend to PEN
3X = nat constr NF # (8)9-11 for (almost) unlimited, 5-7 for 0-7
jump 3Y = 5+Y GF
3cue = 4oM (or some 4M) w/o stopper
3N = no stopper
4m = GF with extra, SI
4M = s/o. either long M with constr values, or (4)5+M will full values

# transfer Leb: ... (2X)
2N → 3C = want to s/o 3X, or SI with C
3CDH = transfers. transfer to opp's suit = ask 4M
3S = ask for stopper
```

```
3N = s/o
after 2N/3CDH, cue = ask for stopper or ST. new suit = nat
```

2.3.2 good-bad 2NT

Similar for opener's rebid, in competition, using 2N to distinguish ranges are also common practices. We also need to define the cases carefully: suppose the auction goes 1X - (A) - B - (C)

- B should never be P. i.e. if resp passes, there are never good-bad. (note: if resp passes, then 2N is unusual)
- (1) C > 2X
- (2) 1X - (jump overcall) - X - (P)
- (3) 1S - (2H) - X - (P)

```
# if not forced
P = nothing special
X = t/o
# no matter forced or not
2X = nat
2N = transfer to 3C, then bid/P = comp (or min if forced)
    3C = accepted. min.
    3X = s/o
    3Y (resp's suit) = this is a special case:
        if it is not possible for him to inv => s/o # ex: 1m - (1S) -
X ...
        if there are cuebid availble under Y => s/o
        otherwise => GF
    other = GF
bid = (mild) inv. if resp already shows inv, then GF.

# One only exception is that, if partner shows a inv+ 5+M, then showing
  fit is too urgent so that direct 3M is just min. However, good-bad
  is still on, just usually won't have M fit.
```

2.3.3 extended good-bad 2NT

not now, but maybe in the future

2.4 ST gadgets

We use some kickbacks here.

2.4.1 non-serious 3M+1 and 3N

```
# If we fit in M:
jump to 3N = CoG
otherwise, 3M+1 = non-serious

# If we fit in m:
3N = non-serious
```

2.4.2 RKC, EKRC, 2RKC

When not in doubt, we use kickback RKC:

```
# 4X+1 = RKC
+1 = 0/3 keycards
    +1 = ask Q
+2 = 1/4 keycards
    +1 = ask Q
+3 = 2/5 keycards, w/o Q
+4 = 2/5 keycards, w/ Q
+5 = even keycards, some void
+6 or higher = odd keycards, the bid suit is void. However, if spl
    before, then bid K.
(X)
    ignore
(+1) or (+2) # interfered: DOP1 & DEPO
    X = 0/3 keycards
    +1 = ask Q
    P = 1/4 keycards
    X = PEN
    +1 = ask Q
    +1 = 2/5 keycards, w/o Q
    +2 = 2/5 keycards, w/ Q
    +3 = even keycards, some void
    +4 or higher = odd keycards, the bid suit is void. However, if spl
    before, then bid K.
(+3) or above
    X = even keycards
    P = odd keycards
    X = PEN
    +1 = ask Q
```

```

    bid = system on

5X = exclusion RKC, ask for keycards except X # 4N replaces X+1 if
    kickback
+1 = 0-0.5
+2 = 1
+3 = 1.5
+4 = 2
...

```

When there's no sure fit shown, or is competed, 4N, or even 5N is RKC.

When a sure doublefit is shown (note: a "scramble fit" is not considered a doublefit), or we showed 5-5 against a balanced hand, we use 2RKC:

```

4A, 2K in the fit suit, 2Q (0.5 each) in the fit suit
two Q is 0.5 + 0.5 = 1
response 0/3/6 (+0.5), 1/4/7 (+0.5), 2/5, 2.5/5.5
the original ask Q is asking whether there are an extra +0.5

```

2.4.3 5N

In order of priority:

- RKC if fit and no 4N available
- choice of slam

2.4.4 ... 4M - 5M

- ask control if opp bids one suit
- general inv

2.5 doubles

2.5.1 support

- is not ON against a natural 1N
- does not apply to D
- does not apply to 1H - 1N*- (bid)
- this is semi-obligatory: you may pass with many wastes in opps suit and min

2.5.2 negative

See [1X interfered](#).

2.5.3 responsive

Traditional.

2.5.4 Lightner

X against a voluntarily bid game/slam, if not slam-sacrifice or have showed power (thus PEN), is requesting a "strange" lead:

- if LDX before, CANCELS IT
- if overcalled before, request DON'T LEAD
- against suit, usually have a void
- against jump to slam or NT, maybe have AK in a side suit
- lead dummy's suit
- lead declarer's suit

2.5.5 maximum X/XX, negative XX, LDX, LDXX

PEN, optional, and maximum, and t/o

2.5.6 slam sacrifice double

This is a very good tool and usually won't hurt (it only sacrifices a PEN or Lightner). The way it work is: We have a preemptive or competetive raise to the 4-level where FP does not apply, and opps bid to slam. Then:

```
... (6X) -
X = 2+ winners
P = 0-1 winners
    X = ask with exactly 1 winner
    P = I have 1 winner
    bid = I have 0 winners
    P = to play. may be 2+ winners, or want to defend, or just don't
    want to sacrifice
    bid = sac
```

2.6 misc

2.6.1 fit-showing jump

A jump is fit-showing (almost) iff PH. Showing 9+ cards and concentrated strength in the two suits, and inv if not interfered, and pre to constr otherwise. In other senarios:

- if we are opener, jump is weak (except 1M - X)
- if we are overcaller, jump is invitational
- if we are overcaller, and opp shows inv+, jump is weak and fit-showing

2.7 vs artificial bids

To tackle those artificial bids' problem, we need classify them into:

- transfers: promising only 1 known (5+ cards) suit
- multi: promise 1 unknown suit
- assumed-fit: promises 0 or 2+ suits: take-out, Michaels, unusual, fertilizer, etc.
- art fit
- multi-way bids that is not above

Situations can also be classified into:

- opponents opened pre (or non-pre, ex: Flannery or precision 2D)
- we opened and are overcalled (since in this case partner has promised some strength)

2.7.1 principles

General principles are:

- advances are generally natrual if it's not opponents suit
- opponents 5+ card suit usually treated as cuebid (meaning might vary)

- if we opened NT, then transfer Leb applied
- P then bid shows a weaker hand. but P then X may vary.
- however, if we already have other methods, then use it (ex: supp X)

2.7.2 vs transfers

- X = t/o and may be lighter than usual (X then X: slightly stronger than usual)
- P then X = PEN if partner opened or they preempted. otherwise still t/o.
- P then bid = often lighter
- direct cuebid = same as original (usually: Michaels, or fit)
- others = same as original

Here are some common situations:

```
(3D = 6+H pre or some stronger hand) - # transfer pre
X = 13+, t/o # then X = 16+, t/o
P then X = PEN
3H = Western

(1N) - (2H = 5+S) - # Jacoby transfer
X = 9+, t/o
P then X = strong bal
2S = Michaels

(1N) - (4H = 6+S) -
X = 9+, t/o
P then X = strong bal
4S = Michaels
4N = unusual (mms)

1N - (2D = 6+H) - # transfer overcall
X = can be less than inv, t/o
P then X = PEN
2H = Michaels
P then 2N = m-oriented t/o

# vs Rubens
1C - (1S) - 1N - (2D = H);
X = t/o
2H = good D (4-th suit)
2S = good C (good raise)
```

```

# vs Rubens II
1C - (1S) - X - (2C = D);
X = supp. 3H.
2D = I think good fit (UvU)
2S = strong general t/o, F1.

(1C) - (1H = 4+S) - # transfer response
X = 9+, t/o
1S = Michaels
2C/2S = nat (same as original!)

(1D = 4+H) -
X = 9+, t/o
1H = Michaels
2H = uncertain. maybe good 6+H, but if 1D promises 5+H then probably
    still Michaels.
3H = Western # same as original

```

2.7.3 vs assumed-fit & unusual

We need to talk about penalty scheme first. When partner opens and opp uses multi or assumed-fit bids:

- P then X = inv+, flat (bal) hand. partner can choose to defend or bid naturally
- X then P/X = PEN in at least one suit. usually sharper so subseq P implies t/o (opener's X is coop)

If they t/o or does not promises a 5-card suit, then we simply use system on, or natural, or otherwise specified. (note: please check our defense to t/o) Otherwise, we use unusual-vs-unusual:

```

# we showed 1 suit, they showed 1 suit (or only one cuebid available)
cue = inv+ raise
raise = constr
jump cue = spl
(2N = mixed raise)
others = nat F

# we showed 1 suit, they showed 2 suits
highest cue under partner's suit = inv+ raise
other cue = inv+ 4-th suit
jump cue = spl
(2N = mixed raise)

```

```

others = nat and comp, NF

# we showed 0 suits, they showed 2 suits
case-by-case

# we showed 2 suits, they showed 2 suits:
treated as we showed 1 suit (i.e. high cue = inv fit)

```

Here are some common situations:

```

# unless specified otherwise:
XX = inv+, at least PEN in one suit
P then X = inv+, flat

1m - (X) - # recall
1N = constr+ C
2C = NF
2N = inv fit.
others = system ON

1M - (X) - # recall
1N ~ 2M-2 = transfers # to suit = usually weak
2M-1 = at least 1M - 2M
2M+ = same

1m - (2m = MMs) -
2H = inv+, om
2S = inv+ fit m # higher cue
3m/om = nat NF
3M = probably spl

1M - (2M = oM + unknown m) -
XX = inv+, at least PEN in one suit # usually PEN oM, but can be PEN
both ms!
2N = "the 2N raise" # if oM = H, then this is inv+; if oM = S, then
this is mixed raise
3m = nat F

1D - (P) - 1H - (2N = S+C) -
3C = inv+ D raise # highest cue under partner's suit
3D = NF
3H = NF
3S = GF H

# 0-vs-2 suit senarios: X and P then X are still the same!
1N - (2C = MMs) -
2D = nat NF
2H = inv, minor-oriented t/o

```

```

2S = GF, minor-oriented t/o
2N+ = transfer Leb (still need to show 5+M)
4DH = still transfers

1C/1N - (2N = mms) -
X = inv+, at least PEN in one suit. or SI with 5+M.
P then X = inv+, flat.
3C = inv+, 5+S; or inv+ t/o with 4+S
    3D = GF w/o 4S. ask
        3H = 4+H
        3S = 3S
        3S = 5+S
        3N = 5+H, 4S # need memorize!
    3H = min, usually 4+H. P/C
        P = s/o # inv
        3S = s/o # inv, 5+S, 3-H
        3N = 5S, 3-H, GF.
        4H = s/o
    3S = min NF
    3N = no 3S, no 4H.
    4C+ = 4+S fit, cuebid # 4S = s/o
3D = inv+, 5+H, usually 3-S. or GF, 5+H 4S.
[1N...] 4CDH = system ON

```

2.7.4 vs assumed-fit pres

If they open preempt, we might need more case-by-case analysis.

```

# default to Dixon defense
(2D/H = MMs) -
X = 13-15, (s)bal # then still Leb. subseq X = PEN
P then X = t/o
2H (if available) = nat
2S = t/o
2N = 16-18, bal
3m = nat
3M = nat, good hand

(2D = fertilizer/Jamming) -
X = 13-15 (s)bal; or X then bid. # then still Leb. subseq X = PEN
P then X = t/o
2M = nat
2N = 16-18 bal
3X = nat

(2N = mms) -
X = 14+ (s)bal; or X then bid. # then still Leb. subseq X = PEN

```

```

P then X = PEN
3C = t/o. S >= H.
      +1 = ask if S > H
3D = t/o. H > S.
3M = nat

# vs constr: 13-15 bal is not urgent to show
(2D = Flannery, 45xx+) -
X = 14+ (s)bal # then still Leb. adv's X = PEN
P then X = t/o
2H = t/o # Leb ON. adv's X = responsive
2S = nat
2N = mms t/o
3m = nat
3H = Western
3S = 16-18, good 6+S

(2H = Flannery, 45xx+) -
X = 15+ (s)bal # then still Leb. adv's X = PEN
P then X (if available) = t/o
2S = NF. t/o to H.
others = same

(2D = 4414, 4405, 4315, 3415) - # treated as opened 2C, since he
      usually has 5+C
X = t/o of C
P then X = t/o
2M = nat
2N = 16-18
3C = Michaels
3DHS = nat

(2H = 4414, 4405, 4315, 3415)
X = t/o of C
others = same

```

2.7.5 vs multi

Multi is hard to defend.

```

(2D = multi) -
X = 12-17, some 5+M; or 19-21 bal # subseq = same as multi
P then X = 13-15 bal or slightly off-shape
2M = t/o in M # subseq = same as (2M) - X. However, jump to 4M shall
      be natrual
2N = nat 15-18
3m = nat

```

```

3M = 15-17, 6+M

(2D = multi) - P - (P) -
X = 13-15, bal or t/o; or some stronger off-shape hand
2M = nat overcall
2N = 16-18, bal
others = same

(2D) - P - (2M/3M) - X = t/o (treated as nat pre)

1N - (2D = multi) -
X = PEN in at least one M # may be some 5M
2M = t/o in M
P then X = inv+. flat hand.
2N+ = transfer Leb

1N - (2D = multi) - P - (P/2M/3M); X = t/o

```

2.7.6 vs art fit

```

X to spl = suggest sacrifice
X to non-GF raise = t/o
X to GF raise = LDX

```

2.7.7 vs other & multi-way bids

```

unless otherwise specified, X to multi-way bids (ex: 1S - 2C = C or S)
are LDX
XX to negative double = lead-directing
XX to responsive double = suggest not to compete
XX in other situations = general strength or lead-directing
(2N = nat) - X = MMs

```

Chapter 3

principles

3.1 misc

3.1.1 cuebids

- if no agreement, cue shows strength and at in many situations GF
- show stop if two unbid suit or opp. bid two suits, and both cuebids are available. otherwise ask stop
- if one cuebid is unavailable, assume the stopper is good

3.1.2 artificial / forcing bid interfered

- general art bid doubled: XX = suggests play. accept transfer = min (so P = mild inv). others = system ON.
- fit cue doubled: XX = Q. bid = don't worry. P = otherwise.
- two-suited bid doubled: P = pick better one. XX = suggest play.

3.1.3 unusual NT vs t/o

if unusual NT and t/o have the same meaning, then NT empathizes distrbitional hands.

3.1.4 unnessesary jump

in non-contested auction: splinter to the last real suit or ERKC. otherwise natural. however should be fit-showing above 2N for passed hand

3.1.5 forcing or not

when opp. inv+ or we are defensive side and they opened and responded, new suit tend to be NF.

3.1.6 fast arrival

fast arrival unless double jump to game after GF (1M - 2X; 2Y - 4M is a picture jump).

3.2 doubles

```
low-level double is not penalty unless:  
XX set up FP  
after someone doubled 1N for pen; or convert a t/o to pen  
no game interest, and deny some suit (or already fit) so that t/o is  
    not possible  
obvious case
```

```
XX is strength / suggest play unless:  
after low-level X converted to penalty: XX is SOS  
3N in a competitive auction doubled # XX = plz re-consider
```

Chapter 4

defensive

4.1 overcall

4.1.1 simple

When unfavorable (or V, by judgement), we'll overcall sounder (the "traditional": either good suit with strong LD value, or 11+).

```
# if PH or partner PH, can be lighter but requires shape or lead-  
    directing  
# if balancing against pre, may be lighter  
# for upper limit, see t/o  
1X = 8+, 5+X  
1N = (14)15-18, usually promises stopper.  
2X = 10+, 6+X; 12+, 5+X.  
3X = (13)14+, 6+X; 15+, 5+X  
jump 3Y against 2X pre = 16-18, good 6+Y
```

4.1.2 unusual

4.1.3 high level

```
(4m) - 4N = nat.  
(4M) - 4N = minors or some 5-5.  
(1m) - 3m = nat. (unless 1D = unbal)  
(1M) - 3M = Western cuebid. ask stop
```

4.1.4 balancing

system ON for now

4.1.5 sandwich

```
(1X) - P - (1Y) -
1N = nat
2X = nat (Rubens from 2Y)
2Y = nat (no Rubens)
after X or overcall: Y is the cuebid suit

(1X) - (2X) - 2N = unusual
(1X) - (1N) - X = t/o to X
```

4.2 t/o

```
minimum take out at 1-level:
4333: 13+
4432: 11+, 43+M or 4+oM
1-card opp's suit: 10+ outside
0-card opp's suit: 9+ outside

at 2-level: +2
at 3-level: +4
may be slightly sounder if adv will likely need to bid 1-level higher.

# style: slightly emphasizes major
```

4.2.1 uncompleted or low-level

```
(1Y) - X -
1Z = 0-8(9), natural length # free bid: 4+ with shape, or 6+
    raise: constr, roughly 15-18
2X = 0-8(9), natural length
jump 2Z = 8-9, 5+Z; or (9)10-11, 4+Z
jump 3X = (8)9, 5+X; or 10-11(12), 4+X
double jump = inv with shape and some strength # not pre!
1N = 8-10(11)
2N = (11)12-13

# after 1X - X
[X = m] cue = any GF; or 44+M inv
    2M = 4+M. raise is the only NF bid
        new suit = usually 5-cards except 2S after 2H
    2D/2N+ = nat and GF. basically shows 16+. # since non-GF must have
    4M.
[X = M] cue = any GF
```

```
[X = m] jump cue = 54+M, good shape, mixed-raise-ish
[X = M] jump cue = Western cuebid (?)
```

After 2X - (X), see [Lebonsohl](#).

4.2.2 interfered

Responsive double.

```
(1m) - X - (XX) - P = pen.
(1M) - X - (XX) - P = pick a suit
```

4.2.3 X then rebid

```
# here min means X then bid's min
non-jump rebid at...
  1-level: 16-19, 5+X
  2-level: 16-19, 5+X
  3-level: 16-19, 6+X; 18-20, 5+X
cue = stronger than above
jump / double jump = similar range (can be slightly higher) but 6+X and
  Loser oriented
raise to 2-level = 15-18
```

4.2.4 high level t/o style

We use double very "elastically":

- at 4H+, tend to show a strong bal with good defensive tricks
- however, may also be hands that promises transferable strength, allowing partner to bid with good shape. An example is -.AQJxx.Axxx.KTxx. With stronger values, you will bid 4N for t/o.
- X to 4H tend to be more t/o-ish, compare to X to 4S+

4.3 advances

4.3.1 NT overcall

system ON for now, but *maybe Gladiator later*.

4.3.2 Basic Rubens: simple overcall non-competed

We use Rubens' advances after a simple overcall to an 1-level suit opening lower than or equal to 2D. We first discussed the case where no interference, including X. The rule is: transfer from opp's suit (skipping 2N), until 2X or 3X (direct raise).

```
(1X) - 1Y - (P)
1N = 9-11(12) nat NF, may be lighter (trying to correct contract) if
    short. sounder if partner PH.
2N = (12)13-14(15), nat inv NF
1Z = F1. usually 5 but may be 4.
2W < 2X = nat, F1, 10+
    then cue = extra, other under 2Y = nat and not promising extra
    raise = min fit
jump 2Z = weak.
jump cue = mixed raise
jump 3-suit = (12)13-14, nat 6+suit inv # fit-showing if PH
transfer from 2X (opp's suit): 10+ (12+ promises rebid); or 8+ with 6+
    suit (can be weaker if longer)
    transfer accepted = not max (13-)
    raise = (12)13-14 with fit
    new suit = F1
    rebid = not min
    others = nat
    # transfer than back to 2X = 10-13 NF, exactly 2-fit
    # transfer than back to 3X = GF, exactly 2-fit
    # transfer than 2N = same as direct 2N, but with side suit
transfer to 2Y = inv+ fit
```

```
(1Y) - 2X - (P)
2N = nat inv NF # roughly same strength as inv against opening
2W < 2Y = nat, F1, 10+ or 8+ with 6+ suit
    then cue = extra, other under 2Y = nat and not promising extra
    raise = min fit
jump 3-suit = (12)13-14, nat 6+suit inv # fit-showing if PH
transfer from 2X (opp's suit): 10+ (GF promises rebid)
    transfer accepted = min # if X: still ON, P shows slight extra and
    perhaps don't like this suit
    rebid = mild extra but NF # no space here ...
    others = nat and GF
    # transfer than back to 3X = GF, exactly 2-fit
transfer to 3Y = inv+ fit
```

4.3.3 simple overcall doubled

- XX = lead-directing (Hx or Hxx)

- if we overcall 1X, then transfer from 1N instead. transfer to opp's suit = 10+ no good shape
- if we overcall 2X, then 2N = some art raise (see [the 2N raise](#))
- others = same

4.3.4 simple overcall interfered

the general rule is:

- X = Responsive. but if they use some transfer, then X = LDX and cue = responsive
- P then X is still t/o (responsive)
- if mixed raise unavailable, then 2N = some art raise (see [1X_interfered/the 2N raise](#))
- if direct cuebid still exists, then Rubens ON
- all bids become competitive and NF instead, only promises a weak-2 hand.
- others = same. i.e. jump is still invitational (of fit-showing)

4.3.5 misc

a "free" 2N rebid of a 2m overcaller is unusual (usually 6+m and 4+om)

4.4 vs 1N

We choose the widely-used multi-Landy, and also consistent with our opening preempt. For responses, see [pre](#).

```
X = at least opp's mid-range
2C = 10+, 54+M; or 8+, 55+M
2D = 6.5-Losers or 10+, some 6+M
2M = 10+, some 5M4m; or 8+, some 5M5m
2N = nat 55m wide in range
3m = nat. vs strong: wide in range, comp; vs weak: very constructive
      (13-15), inv 3N
3M = nat pre
3N = Gambling 3NT
```
